I am using 500mg/week Deca for about two weeks. I didnt add testosterone to the cycle, i decided to go only with Deca and anavar. I know these two dont stack together. The trainer told me from the beggining to add Tren, not for the water retention issue but for the gains. Need your help regarding following cycle WINNY/DECA/TEST. I only have 250mgs ampoules of Deca and Test Cyp. Please advise if the below cycle is good. I can also get 100mg of eacg test and deca ampoule if required. I have been training since 5 years and have used steroids mainly testosterone only few cycles and also with anavar or deca in the past.

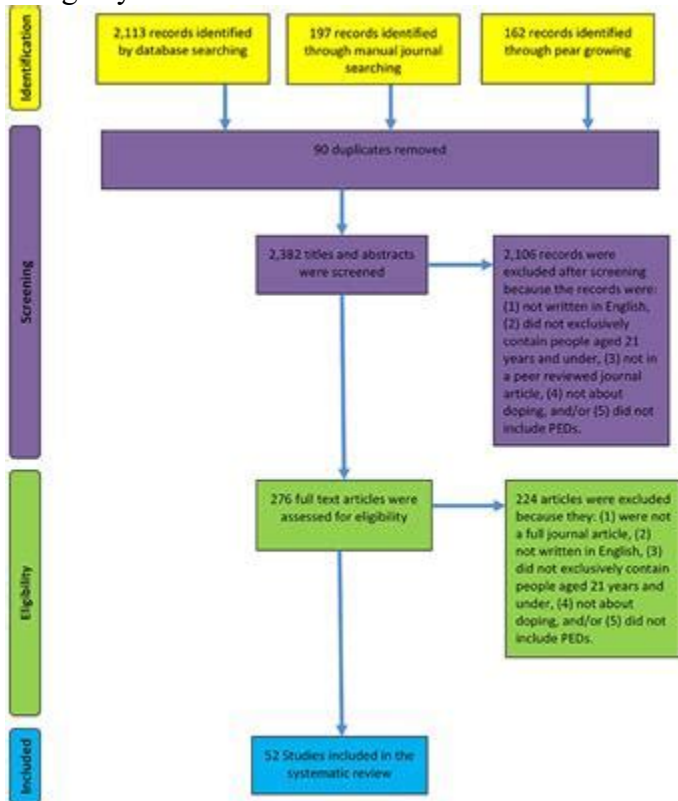

Anavar and Tren steroid cycle Known stack for clever chemists with experience, who know how to get the most without injuries. Multi combo for skilled athletes from the BB, and contact forms. Trenbolone is a turbo-booster for any task, precisely in this stack it works for the maximum force and maximum definition. Anavar complemented with [...]

6 Testosterone and Dianabol Cycle. 6.1 Test & Dbol Side Effects. 7 Testosterone and Deca Durabolin Cycle. 7.1 Test & Deca Side Effects. 8 Testosterone and Trenbolone Cycle. 8.1 Test & Tren Side Effects. 9 Testosterone and Anavar Cycle. 9.1 Test & Anavar Side Effects. 10 Testosterone and Anadrol Cycle. We all know the story with Tren, Radical Strength gains FAST, and Aggression. The Aggression is largely do to Tren being what I call a "Triple Androgen" up to 3-4 times more potent then Test in terms of operating as an Androgen on the CNS. Now the Strength gains are so Fast that MANY injuries ruin peoples cycle with Tears and more. The reason this happens is Collagen Synthesis, and Elastin. Im trying to finish rounding things up to get this cycle started. This will be my 3rd. I have test E and deca that I plan to run for 16 weeks. Im thinking about kicking it off with anavar. Here is what it looks like so far. Weeks 1-16 Test E @500mg/week Weeks 1-14 Deca @ 250mg/week Weeks 1-4 Anavar @ 40mg/day Weeks 1-16

The Best and Worst Deca Durabolin Stacks - Test, Trenbolone, Anavar, Winstrol and Others. Planning a Deca Durabolin stack is quite a difficult task. If you are aware of the many side effects this anabolic steroid is known to cause. The same is true, that Deca Durabolin is one of the most versatile steroids that can be easily used for bulking. I just started a new 12-16 week cycle consisting 300 mg of Test E, 100 mg Tren E eod and 250 mg of Deca weekly (I may adjust the doses up or down depending on results). Also, .50mg Arimidex eod (as per my DR's advise as he knows I cycle 2-3 times a year while on TRT).

I'm planning on starting a cycle of Test e - 600mg week 1-10 Deca - 300 mg week 1-10 Hcg- 500 iu a week 3-13 Anavar week 6 - 13 Pct 14-17 clomid & nolva What are your thoughts on adding anavar ? I initially didnt plan to add in anavar I am at 13-14% bodyfat atm aiming to bulk up but also wanna look hard & defined at the same time [see here](#)
