Unit Shelf Range

Our Unit Shelf range is made with a modular parts system to match your style and needs. Choose from our existing basic combination sets, or customise to suit your requirements with individual parts.

Basic Configuration of Unit Shelf

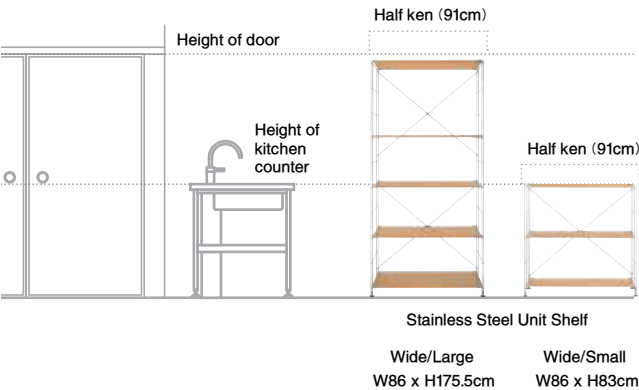

The Unit Shelf body is made from Frames, Shelf Boards and Crossbars. Assembly is easy with the included hex wrench, and the shelves can be installed at 18.5cm intervals and adjusted to suit your use. While Frames come in a number of finished steel options with matching shelves, there are also Oak Wood options for Shelf Boards for a natural feel.

Our Approach to Standard Dimensions of Modules

The standard dimensions of MUJI storage furniture modules are based on “shaku”, traditional units of measurement used in the construction of Japanese homes. These standard dimensions determine door clearances, counter heights and so forth. Subsequently, these dimensions are widely used in the designs of a variety of MUJI items ranging from large furniture to small storage items. For example, one “ken” (182cm) is the standard width between two pillars. Therefore a standard design dimension in MUJI products like our shelf range is one ken and half ken so they can fit neatly within pillars.

Unit Shelf module dimensions 175cm and 86cm

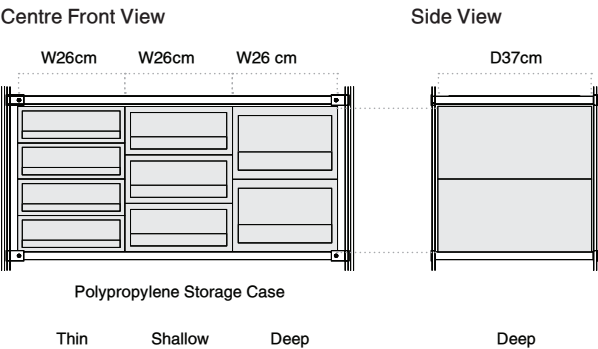

The 175cm Unit Shelf height corresponds to the standard height of doors in Japanese homes, while 86cm width is based on half ken.

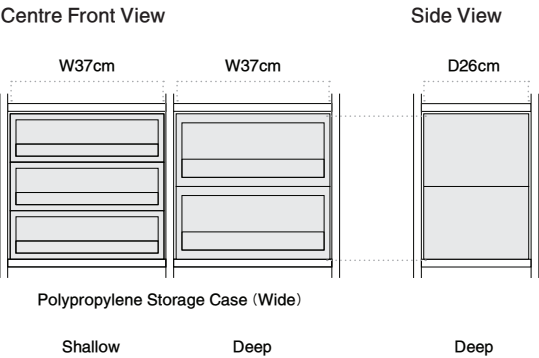

Storage item module dimensions 37cm and 26cm

MUJI Storage item modules are designed to fit neatly within our storage furniture shelves.

Size that fits on Unit Shelf: W26 x D37cm

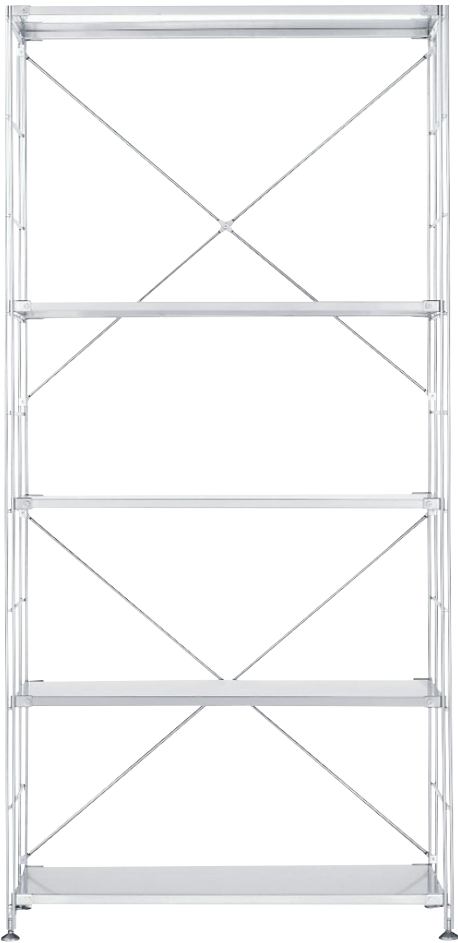

Size that fits on Stacking Shelf: W37 x D26cm

Steel Unit Shelf Parts Required Table

For our Unit Shelf, the number of parts required for assembly is determined in order to maintain a certain level of strength. The minimum required number varies depending on the combination, so please check the table below.

					
		L	M	S	Mini
Width 84cm	Shelf board	3 pieces	3 pieces	2 pieces	3 pieces
	Crossbar large	2 pieces	1 pieces	1 pieces	0 pieces
Width 56cm	Shelf board	3 pieces	3 pieces	2 pieces	3 pieces
	Reinforcement parts	2 pieces	1 pieces	1 pieces	0 pieces

Boxes and shelves shifted diagonally.

Boxes and shelves are horizontally adjacent set to position.

How to Combine Stacking Shelves

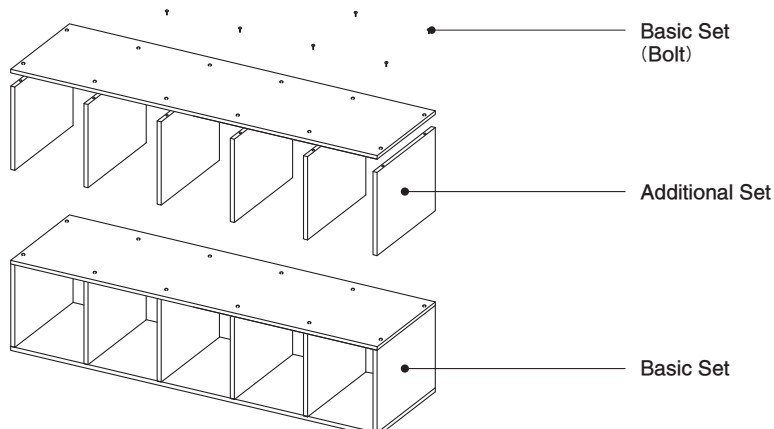

You can freely create your own original storage by combining the basic set and additional sets. The connection method is as shown in the structural diagram below, connecting the steel pipes inside the partition plate. It can be easily connected by bolting it together.

Stacking Mechanism

Structural Drawing

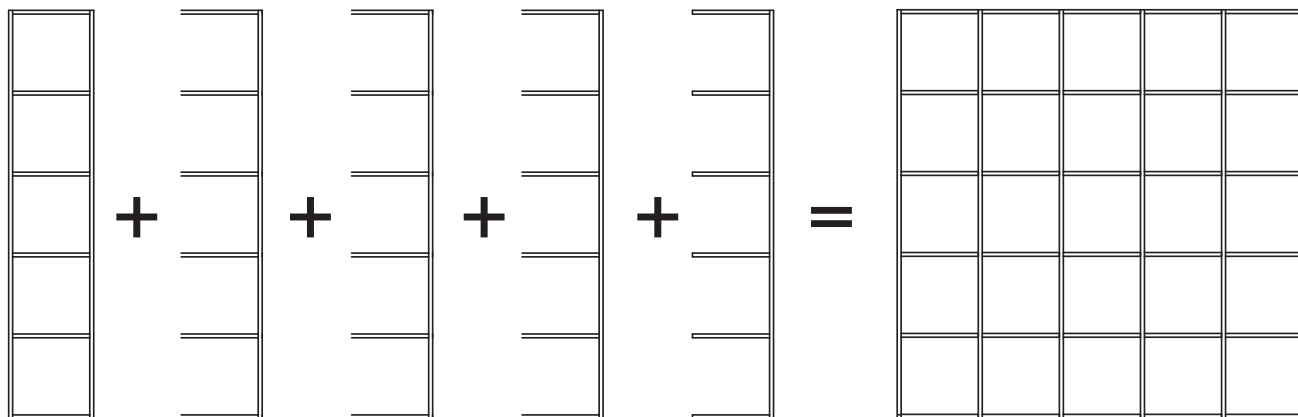

Horizontal Diagram

Combination Examples and Load Capacity

This is a combination method in which the main body is connected horizontally while remaining vertical.

Load capacity: Total 150kg = 60kg x 5 pieces ÷ 2

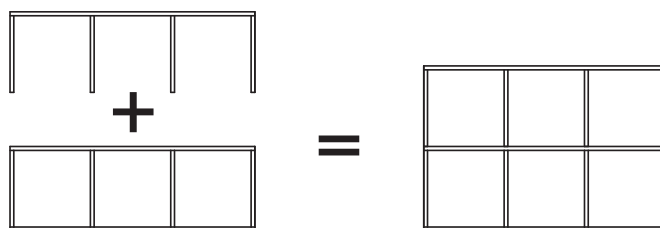

Basic set 5 stages x 1 + additional parts 5 stages x 4

This is a combination method in which the main body is laid horizontally and connected upwards.

Load capacity: Total 40kg = 40kg x 2 pieces ÷ 2

Overall load capacity when used in combination =
Set load capacity x Number x 2

Basic set 3 stages x 1 + additional parts 3 stages x 1

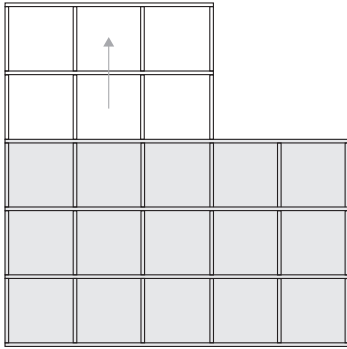

Stacking Shelf Open Type Structure

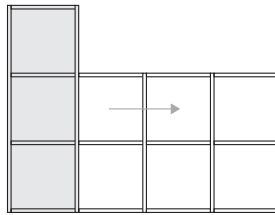

You can create free storage by combining the basic set with open parts made of steel pipes. The following two patterns are the basic combinations.
(Common to 2nd and 3rd row).

Usage Example

Use in combination with different numbers of stages

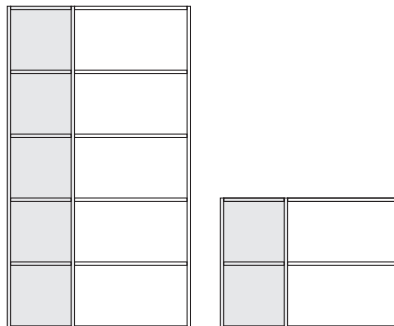

Connect the main body horizontally.
This is a combination method.
Can be stacked up to 5 tiers.
The wide type cannot be used horizontally.

Connect the main body horizontally while keeping it vertically.
This is a combination method.

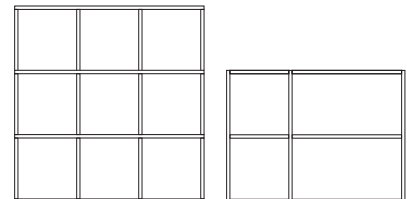

Use items with different widths together

This is a combination method in which items of different widths are connected horizontally while keeping the main body vertical.
The wide type cannot be used horizontally.

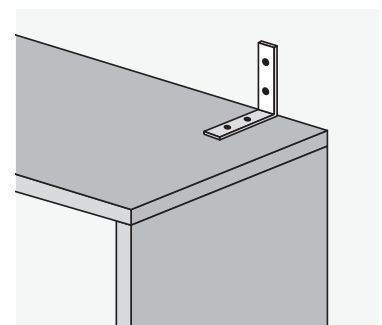

Use as a partition

If the height is up to 3 levels, you can connect them and use them as a partition without installing the included fall prevention auxiliary fittings.

Regarding Fall Prevention Measures

- The basic stacking shelf set comes with an auxiliary set of fall prevention fittings. When using the product at a height of 4 or more shelves, be sure to attach the fall prevention auxiliary fittings.
- It must be fixed to the wall with special pins (for plasterboard walls) or wood screws.
