

the most advanced coating system

The Ceramic Pro Marine line is a revolutionary clear nanoceramic formula designed to protect the surfaces of your vessel. When cured this technology will chemically bond, transforming itself on the surface to become a rigid superstructure of nanoglass, protecting your boat for long periods of time.

Ceramic Pro Marine is a multifunctional protective coating for all surfaces of your vessel above and below the water

The nanoceramic coating forms an exceptionally strong and durable shield that is resistant to chemicals, dirt, oxidation, UV rays, corrosion and harsh weather conditions.
