

REMOTE GREASE BANK SYSTEM

Equipment maintenance is an important function, but how do you get it all done? Today's modern agricultural equipment can have hundreds of locations requiring grease. Often these grease points are critical components that are tucked into hard-to-reach areas, or covered in dirt. When the weather is right, your equipment needs to be making you money, not held up for maintenance or repair.

Lubecore's Remote Grease Line System brings the grease points to a safe and convenient location on the equipment. No more crawling over and under your machinery to get a grease job done. No more time wasted cleaning away crud just to get access to the grease nipple. With less time required to get the job done, you have the confidence that your equipment is being maintained without sacrificing uptime.

Position	Description
1	Male Threaded Barb Fitting 1/8 NPT
2	Hose Clamp Stainless Steel 8.7mm
3	Korilla Hose – High Pressure Prefilled 8.6mm
4	Female Threaded Barb Fitting 1/8 NPT
5	Remote Line Fitting Bracket
