

ATOMIC ROUND SUSPENSION

ATOMIC ROUND | SUSPENSION

Atomic round chandelier was inspired by the molecular composition of the atom as a nod to the atomic age and race to space mid-century era. DelightFULL's designers created a round set of spotlights all arranged to look like the non-conventional molecular forms. This unique black chandelier is all handmade in brass and steel, with a gold-plated finish on the body and lacquered a glossy black on the round shades. The inside of the spotlights is lacquered a gold powder paint, in order to create a smoother light to the human eye. The right modern dining room lighting design, Atomic round chandelier cannot be missed. It is also suited for a more scandinavian style living room, being the perfect example of class meets fun.

MATERIALS

Body : Brass & Steel
Shade : Steel
