

Earth Stool

Made from FSC certified wood or upcycled industrial waste

Earth Stool is the result of a new innovative waste-to-value technique that enables Mater to reuse companies' industrial waste. The seats comes in three variants, FSC certified oak wood or upcycled plastic from the global leader in diabetes care, Novo Nordisk' production of insulin pens. The plastic waste is mixed with coffeebean shells from BKI coffee or a bi-product from Carlsberg's beer production – the spent grain, called 'Mask' in Danish.
