

Hardware

Tools Required

01 Connect wall brackets

If your STACT wine wall will be 2 or more panels high, you'll want to secure them together. Otherwise proceed to step 2.

a. Insert coupler half way into wall bracket opening.

b. Tighten screw until securely fastened.

c. Insert coupler into second wall bracket opening.

d. Tighten until securely fastened.

02 Attach wall brackets to wall

a. Once you have decided where to place your STACT panels, using a level, position the left set of brackets against the wall in its intended position.

b. Mark the center of each of the elliptical openings.

c. Drill into pencil marks using 3/8" drill bit (if a stud is present, instead screw directly into the stud).

d. Insert wall anchors into wall.

e. Using a level, fasten the wall brackets (semi-snug) to the wall anchors with a washer between each screw and wall bracket.

f. Attach just one panel to the right set of wall brackets, and then to the secured set of wall brackets to ensure the correct spacing.

Continue on reverse...

02 Continued from page 1

g. Hold the right set of wall brackets against the wall (keeping level), and mark the center of each of the elliptical openings.

h. Fasten right set of wall brackets by simply repeating steps c. through e.

b. Starting from the bottom position, insert the bottom panel (bottom panels do not have a 'STACT' logo on back) into wall bracket keyholes.

c. Insert the top panel (top panels are marked with 'STACT' logo on back).

03 Mount panels

a. Using the hex key tightly secure the bottle supports to the panel with the included fasteners and washers.

d. Mount the remaining panels in the same manner.

04 Proceed to next column

a. Repeat steps 1 through 3, ensuring wall brackets are butted up tightly between each column.

Congratulations, you are all done!
We'd love to see how you 'STACT' them. Follow us on instagram and tag your rack with #getSTACT.
