Light Garland 12m +10 Bulbs G45 2W white IP65

LED garlands are effective and atmospheric lighting for gardens, terraces and balconies. Colorful or filament bulbs allow you to illuminate garden and spend long summer evenings outside with friends and family. You can also use RGB bulbs to create a unique atmosphere and the shimmering colors will create an atmosphere of fun and relaxation. The distance between the bulbs is 1 meter and the length of the entire garland is 12 meters. The first 2 meters from the plug to the first bulb allow you to freely install the garland without worrying that the first bulb is too low! The last meter of the cable allows you to conveniently extend it with another garland. The 2x0.75mm² wire cross-section makes it possible to connect up to 10 garlands and illuminate a larger area, such as dance floors, restaurants or large gardens. Remember to use bulbs only with E27 thread! Garlands with mounted bulbs are waterproof and the solid materials used make our product work safely for many years. The garland is waterproof only with all bulbs fitted and the bulbs are undamaged! Remember to check bulbs condition regularly!
