

Fromel Electronics

GO!—Owners Manual

Thing 1: T-Filter (kind of like a tone control)

Rough/Smooth switch:
Takes the clipping diodes out, cleaning up the drive and giving you boost in volume.

Output

Thing 2: Transistor bias
(kind of like a gain control)

9v Power

Input

The Go! is a dynamic drive with two controls Thing One and Thing Two. This pedal was inspired by three of my favorite things – Dr. Seuss, Tones on Tail, and Guitar.

I suggest using an external AC adaptor, any 9v Negative Ground 2.1mm (Boss Type) adaptor should work fine. There is also a 9v battery snap inside the enclosure if you want to use a battery. In other soft-touch bypass systems, if you lose power the pedal stays in 'on' mode, and you are left with a useless pedal that blocks your signal. The soft-touch bypass system in these pedals will automatically revert to bypass mode if your pedal loses power. This way, you can continue playing your set without needing to unplug the powerless pedal.

The enclosure is hand etched and polished, and finished with a thin, volatile paint and clear coat, the organic nature of the finishing process gives each pedal a unique look, that will change over time, this is normal. The pedal is rugged and uses high quality components, however just about anything can break if enough force is applied.

If you have any problems with your pedal, send it to me for repair, if the problem was caused by excessive force, I will charge you for the broken parts, and shipping. If there was a defect in the product in manufacturing or parts I will fix it and cover shipping back to you in the continental US. There is no need to register your pedal if you purchased it directly from me, if you purchased from an authorized retailer just send me an e-mail with the model and serial number of your pedal.

A note on the environment. When quality is not compromised I use lead free parts. However, the silver bearing solder does contain lead and if vintage NOS components are used they may contain lead as well. I don't use fancy shipping boxes and try and re-cycle as much as I can. The box your pedal is shipped in and the packing material used to protect it during transport to you have been re-used if possible. God has given us a beautiful place to live, let's all do our part to keep the place picked up.
