LOGOS PRIMARY

Give these logos of space so they are easily recognizable to our audience. To determine how much white space you need measure 1/5th of your vertical logo's height. For your horizontal logo measure 1/3 of your logo's height.

Vertical logo

Horizontal logo

* Sometimes material production or vendor requirements don't allow for multiple colors or gradients (for instance, stitching on hats, or screen printing). In these situations, use a logo with a solid colored light bulb.

LOGOS ALTERNATE

These are the TWT Audio EDU alternate logos. Use these versions of our logo sparingly and/or for watermarks.

LOGOS APPLICATION

Specific logo variations have been developed in order to ensure the best results for a wide range of scenarios. Follow the rules below for consistent and effective use of the logo across all brand materials. Ensure that there is a 1:3 contrast ratio between the logo and background

ICON APPLICATION

Specific icon variations have been developed in order to ensure the best results for a wide range of scenarios. Follow the rules below for consistent and effective use of the logo across all brand materials. Ensure that there is a 1:3 contrast ratio between the icon and background

LOGOS INCORRECT APPLICATION

Consistency and visual contrast are critical to maintaining the recognizability of your logo and business. Be aware of too little contrast between colors and using too many colors. Reference the examples below to get a sense of what a bad logo/icon color and background color pairing looks like.

COLORS

PRIMARY / ALTERNATE / NEUTRAL

For print use PMS or CMYK values. PMS are Pantone ink colors, the standard and most reliable color system for print. CMYK values are a less expensive, but also a less accurate alternative to printing with Pantone colors. For screens: Use RGB and HEX values. RGB values have more color range, but not all browsers display them accurately. HEX values have less color range, but older browsers display them more consistently
