76

Hydrostream boats are original creations from the drawing board of Howard Pipkorn. He employs a system of convexo-concave, skin-stressed design unified with styling to produce boats with a rigidity of hull that delivers unparalleled high speed handling and driver confidence. Every clean, gracefull line and curve is a highly functional component of the unique duality of air and water streamlining.

The innovative hydro-aerodynamic engineering concepts, material utilization and painstaking assembly produce a maximum strength to weight ratio and wring every last mile per hour out of the available horsepower.

Every Pipkorn prototype undergoes hundreds of hours of on-water testing, racing, modification and retesting. The final shakedown, even for family boats, is actual racing.

When a new model series is finally approved for production, they, like all Hydrostreams are hand-crafted from the finest components inseparably bonded to spaceage core material to form rugged, durable, race proven hulls which carry a beautifulshimmering, fire-glass finish.

Because the sustained high speeds of racing are the ultimate test of a boat.

Weakness of any kind-in physical structure-stability-cornering ability - rilaws in any other facet of design show up very quickly in the battering arrind of racing.

New materials and construction methods which prove out on one-of-a-kind race boats are immediately used on production models to afford Hydrostream buyers maximum strength, minimum weight and maximal go.

Race proven hulls are proven, quality hulls. That is why Hydrostream is proud that its racing team holds many national competition titles.

> In 1972 the American Power Boat Association's Outboard Pleasure In 1972 the American Power Boat Association's Outboard Pleasure for Family Sk-Boat. The class requires two drivers; a designated engine height, (propeller shaft must be 5" below the boat bottom); allows the use of power tim and carries a 1450 lb. minimum weight restriction.

> In 1973, the first year of record for the FS class, HydroStream Venturas won the U.S. National Closed Course Championship, the U.S. National Marathon Championship and set the 1 hour, 2 hour and flying kilometer speed records.

Because of the format stipulations governing the FS class, and because the equipment is available to the general public, we at Hydro-Stream fiel that our customers can closely relate to this type of boat.

We shall therefore support the FS classification, and on behalf of HydroStream buyers continue to refine our craft which fall into the FS group.

VECTOR

"Vector" is a term used in engineering to designate a quantity having both magnitude and direction.

Correctly powered, HydroStream's Vector offers a great "magnitude" (measure) of speed with constant control. Even at rest its sleek profile has all the "direction" of a bolt from a crossbow. Its subtly contoured lines and swept-back windshield are reminiscent of a Lear Jet.

Standard trim includes high-back, vinyl bucket seats, rich, thick, pile carpeting and a wood grain steering wheel. Like a flying wedge, Pipkorn's Super delta V hull parts

the roughest waves and rides over the smaller ones.

Vector gives its driver the confidence of having full

Vector gives its driver the confidence of having ficommand.

Length 17'1"—521 cm Beam 89"—226 cm Transom Height 23"—58 cm Coast Guard Approved Power Range 60-165 HP

VIPER

The Viper is a distillation of a combination of original concepts employed by Pipkorn in his highly successful Delta-V series experimental and racing hulls.

A richly trimmed interior is a concession to the

weekend boater and his lady friend. The Viper uses an airfoil principle combined with the lifting action of water. At speeds over 40 miles per hour the hull is all but air-borne. Because the "lift" achieves maximum effect at the transom it results in an explosive throttle response and instantaneous steering control virtually unequaled in any ski-boat.

This swiftness of reaction is that of a striking snake.

Thus, the Viper. Length 15'-457 cm

Transom Height 21¾"-55 cm Coast Guard Approved Power Beam 84"-213 cm Range 50-120 HP

VENTURA

The Ventura is a flared bow, dry-ride, high performance, fun boat for the truly discerning boater. It holds national championships in both sprint and marathon competition and is recognized as the most stable of all the "V" bottoms available.

The high-performance characteristics Pipkorn achieved through huli design with airfoil lift make "Ventura" the outstanding claimant to "the best all around playboy's watercraft"

Versatility is built into the Ventura. Not only is it outstanding in speed and agility but increased depth and cockpit size make it ideal for the family with youngsters.

The avid skier will choose Ventura for its planing power, tracking, turning and overall performance.

Length 161/2'-500 cm Beam 84"-213 cm Transom Height 21%"—55 cm Coast Guard Approved Power Range 50-140 HP

VIXEN

The sleek Vixen is the product of a collaboration amous Florida raceboat designer, Ed Hauptner, and Howard Pipkom. The Hauptner hull design has at one time held virtually every small, family class record in the book. HydroStream glass craftsmanship has converted this thoroughbred racer into a sporty, utility ski-hoat.

ski-boat.
The spirited Vixen's compactness, and its ability to wring excellent performance out of a fuel-saving, low horsepower engine combine to make this ski-boat an ideal craft in which to escort your number one girl on a brisk four of the wonderful world of water.

Features such as mechanical steering, deluxe double bucket (bench type) seat, etc., are standard equipment.

Length 141/2'--445 cm Beam 73"--185 cm Transom Height 21½"—55 cm Coast Guard Approved Power Range 20-85 HP

LITTLE HUSTLER

The "Little Hustler" is just what the name implies she is little (but has plenty of room for two adults) and she really hustles. 28 MPH with 20 HP.

This compact two place sportabout is just the ticket for skiing and tearing up the waves. We added a small tunnel in the center of the hull to improve handling in the turns, without stealing top speed in the straightaways.

Grab your chick, program yourself for fun and cast off in the Little Hustler. Have a real ball.

Length 12'-366 cm Beam 64"-163 cm Transom Height 15"—38 cm Coast Guard Approved Power Range 15-25 HP

Use Short Shaft Motor

WARRANTY TO ORIGINAL PURCHASER

Hydroldmenn warrants its new production hulls to be time from defects in materials and waterials and waterials with the period disciplined the product of developing in authorized hydroldmen disciplined and the period of the period disciplined the materials are period by the owner.

This warrant open not specify to defore, windsheds, carpetine, upholding or hardware.
