

# Hydr Streams

It is our purpose at HydroStream to provide the buyer with the most innovative engineering available to achieve a performance and styling unique to itself. The elements of HydroStream design are more than style, they are additions to performance. Intensive use of sculptured skinstressed surfaces reduce weight and increase strength. Superiority, however, is not tatained by design alone. Carlismanship and quality construction materials are a necessity. All prototypes of our models and materials undergo many hours of developing, testing, proving, correcting and retesting. HydroStream is continually researching and testing new concepts and materials to achieve a higher degree of performance and styling.

1977 World Racing Champion, Howard Pipkorn, member of the American Power Boat Association "Hall of Champions", and several time National Champion, uses his racing experience coupled with engineering skills to design HydroStream products. His winning record is positive documentation of HydroStream performance and endurance.

#### NOTE:
