

BROADEN YOUR HORIZONS

Welcome

Welcome to Solstice Leisure Spas and Swim Spas.

A Solstice Leisure Spa is a relaxing experience start to finish, beginning before you even take your first dip!

You can relax in the knowledge that having produced spas since 1989, over 30 years of experience and innovation has gone into the manufacturing process of your spa. Our industry leading production techniques ensure your spa or swim spa provides many years of efficient and trouble free use. Our ergonomic shell designs cater to every body shape, expertly selected and positioned jets ensure the right jet is in the right place to provide the perfect massage experience. There's nothing quite like a Solstice Leisure Spa.

Solstice Leisure Spas are imported to the UK by Catalina Spas Ltd. The UK's longest established hot tub and swimspa supplier, trading since 1997.

Did you know?

The vast majority of all spa components are now made in China, from controls systems, jets, pipework, pumps, music systems, lighting, and even the materials for manufacturing the frame and cabinet. It makes sense, and is much more cost effective to assemble these components in their country of origin, rather than shipping them half way around the world, before then shipping them on again for resale as completed items, that's a lot of shipping!

Built Smart

A well built spa starts from the ground up.

1. Moulded ABS Base

The very first step is a pre moulded ABS base, this seals the heat in, while keeping the cold, weather, rodents and insects out.

2. Aluminium Frame

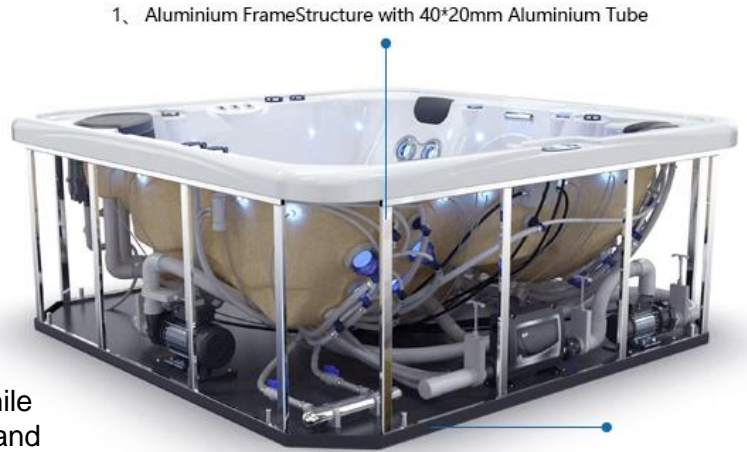

Our super strong aluminium frame starts in the base, with interconnecting bars running right under the spa for maximum strength and a full perimeter frame at the top to prevent pressure points on the shell.

3. R-20 Insulation Board

It is just as important to insulate the base of the spa as it is to insulate the side, otherwise you get 'cold bridging' which allows all of the precious heat to dissipate into the ground. Our insulation also contains borate, to keep unwanted pests at bay.

4. PVC Protection Board

The final piece of the puzzle which acts as an additional moisture barrier, and also protects the base insulation.

1. Aluminium Frame Structure with 40*20mm Aluminium Tube

2. ABS with Inner 10mm PVC protection board

Warranty

- 5 Years
 - Shell Structure
 - Frame Structure
- 2 Years
 - Electrical Equipment
 - Plumbing

6 Stage Efficiency

All Solstice Leisure Spas come with the highest insulation grade in the industry, our to ensure running costs are kept to a minimum.

1. **Base insulation** – to prevent heat loss directly to the ground beneath your spa.
2. **Cabinet Insulation** – to prevent heat loss to the air surrounding your spa cabinet, and keeping the cavity between the spa cabinet and shell warm, and to protect the components from cold weather.
3. **Shell insulation** – to help keep warmth in your spa water for longer.
4. **Insulation cover** – our 5" to 3" tapered insulation cover prevent water pooling and lock heat inside.
5. **Technology** – We use the latest Balboa control systems and heaters to ensure the efficiency of your spa is being managed as effectively as currently possible.
6. **Optional alternative heating** – We are able to fit any kind of optional heating source to your spa, including heat exchangers, and heat pumps to further reduce running costs.
