TDS METER

READY PURE

The Ready Pure system is used to create pure water for automatic scrubbers, mop buckets, trigger sprayers, carpet extractors, water fed brushes to clean windows or to be used with chemical mixing stations.

Ultra pure water is not found in nature. It is unstable in its pure form and carries pent up cleaning energy to solubilize soils and other contaminants it comes in contact with. Ultra Pure water can be used alone (in light or medium soil) or in conjunction with chemicals (in medium to heavy soils). It leaves no residue behind and is perfect for cleaning windows.

Ultra Pure water makes cleaning chemicals more efficient and effective by eliminating the need for the chemicals to treat the water and apply all of its cleaning energy to dissolve the soil that needs to be removed. Cleaning chemicals work by improving the ability of water to release, dissolve and hold the soils in solution that have been removed from the surface.

Kit includes: DI cartridge, DI holder frame, wall mount screws and a magnetic TDS meter
