

## Slingshot Glider Instructions

**Build & Fly:** Slingshot gliders

**Instructions:**

**Materials:** Slingshot glider template, tape, scissors, straw, two rubber bands, stapler, paper clip, markers (optional)

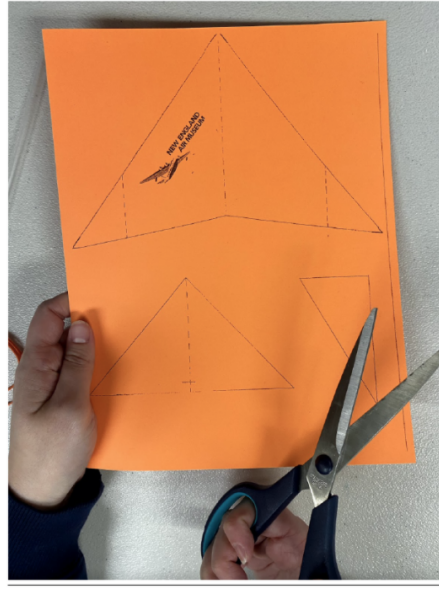

**Step 1:** Create the fuselage. Take two rubber bands and thread them into the paper clip.

**Step 2:** Put the paper clip inside the straw and staple it.

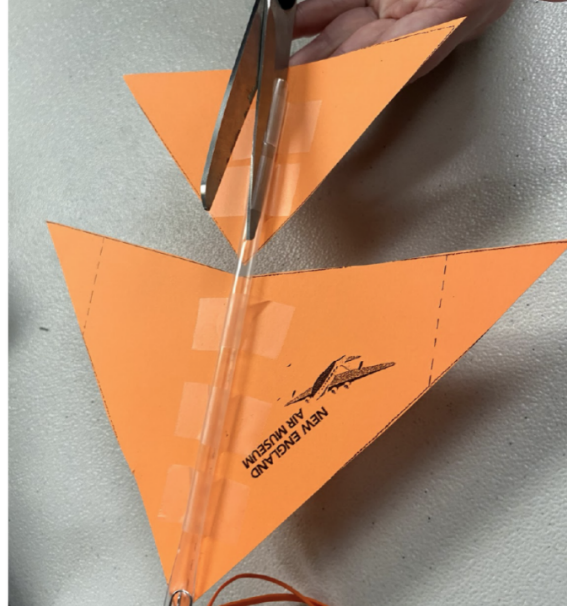

**Step 3:** Cut out the three triangles on the template on the solid lines.

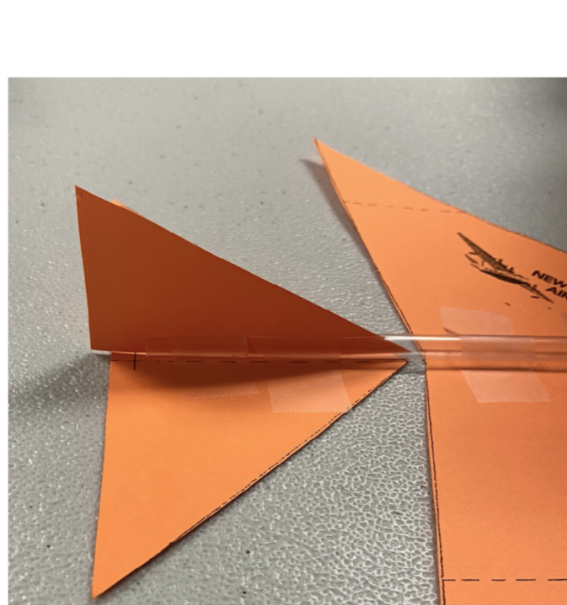

**Step 4:** Put the smallest triangle to the side for now. Take the two bigger triangles and line the straw up on the dotted lines, with the rubber bands at the point of the larger triangle. Secure with tape.

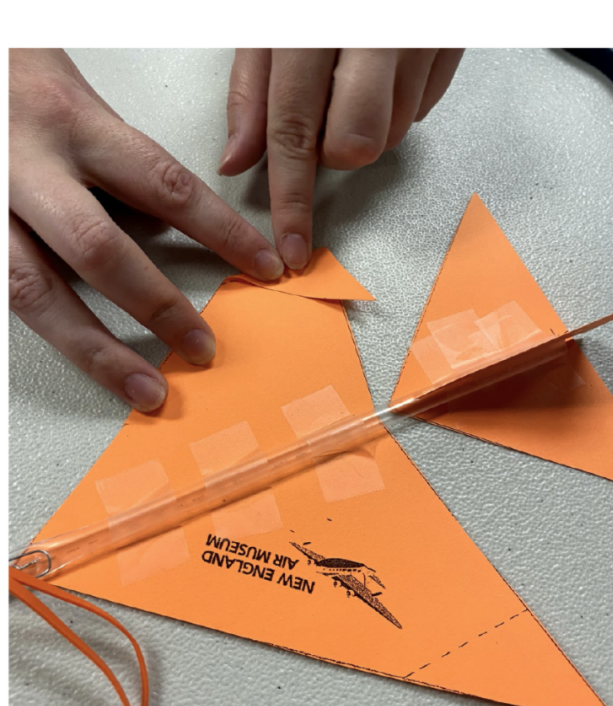

**Step 5:** Take your scissors and cut in the back of the straw.

**Step 6:** Slide the smallest triangle into the cut you just made. Secure the triangle with tape.

**Step 7:** Fold the edges of the largest triangle on the dotted line at an angle.

**Step 8:** Congratulations, you've finished your glider! To launch, put one rubber band on the top of your finger. Pull the back of the glider towards you. Once you're aimed in a safe direction, let go of the back of your glider and watch it soar!
