Simple Tips to extend the life of your sustainable toys

- After playing, use a damp cloth to clean and dry the toys thoroughly.
- Preferably, do not use normal cleaning products because – unless they are marked as nontoxic – they may contain chemicals that can easily be absorbed by children.
- Keep toys especially ones that contain rubber parts in a dry environment, and avoid high temperatures and direct sunlight.

Clean and share the toy is another way of Sustainable Play!

- Examine your toys regularly to ensure that they are in good condition.
- For water toys, do not soak them in water for over 24 hours. For other wooden toys, do not soak them at all.
