

Important Efilive AutoCal info, **Derks Custom Cars**, matt@derkscustomcars.com

www.derkscustomcars.com

Please read the info below carefully.

A few important points:

- An AutoCal is NOT locked to any vehicle
- An AutoCal is not permanently 'stuck' to a tuner
- An AutoCal V2 can flash 221 vehicles, a V3 can do 600 vehicles

AutoCal sellers might make you believe that you can only use their tunes and that you cannot switch to a different tuner. The tuner who sold you the AutoCal can provide you with an un-link code. Not all tuners want to do that, they like to keep your AutoCal hostage. If this is the case, or if the tuner is no longer in business, a \$50 un-link code can be purchased from www.efilive.com.

If you un-link an AutoCal, the tunes from the previous tuner will be lost.

When switching tuners and if the AutoCal has been used on your current vehicle, a VIN license is not required. If you wish to flash additional vehicles, a VIN license will have to be purchased for every additional vehicle.

A FlashScan is not linked to anyone, it can flash any provided file into any vehicle with a valid VIN license. Provided the vehicle is supported by Efilive.

I hope this clears up a few questions but if you have any, please don't hesitate to contact me.
