## Product Overview

The Excel Encasa pre-terminated ferrule only drop cables have been designed for speed and ease of installation aimed at the FTTH and multi dwelling market.

The cable consists of a single core 900 µm tight buffer single mode G.657.A2 fibre surrounded by aramid yarn as a strength member covered with a white LSZH outer sheath available in LCA and SCA.

This unique design allows cables to be pushed down short runs of micro duct or installed onto tray work with the ferrule already terminated to the cable allowing smaller holes to be drilled through walls and cable to be passed through smaller enclosure entry ports.

The final termination is then a simple housing that is clicked into position removing the need for fusion splicing.
