Stone

Designer: Pearson Lloyd
Year: 2009

Stone is a new system of modular sofas with simple, easy shapes but rich in elements and with enough assembling choice to fulfill the needs of the widest range of public areas. Soft and comfortable, they draw upon the roundness of stones honed by flowing water, and come in a wide range of upholstery. Stone sofas are manufactured in many variants and can either stand alone or set in cleft to enhance their elegance, are available in two heights: one is suitable for hotel contracting, waiting rooms and public areas while the other is more suited for catering areas, bars and cafes. The system is also complemented by a full set of matching tables: free-standing or end-tables, with two T-shaped legs or a single central base.

Materials informations

Poplar plywood	39%
Polyurethane	38%
Upholstery	15%
Metal	8%

Polyurethane

Flexible expanded polyurethane is a solid elastic polymeric material with open cell structure. It is a non-toxic material and above all free from ozone-damaging components. Production and processing of the polyurethane we use meet the objectives of the new policy of ensuring the protection of human health and of the environment. We focus in particular on the choice and use of the types of density of polyurethane suitable for preserving over the years the features of load capacity, elasticity and resilience. For products used in public spaces flame-retardant expanded polyurethane is chosen, tested and certified according to international regulations.

Metal

The need to combine complex yet lightweight shapes with resistant materials necessarily involves the use of metals such as steel and aluminium. products in polyurethane foam are made with an inner steel frame for adding strength to the structure. The bases are in tubular metal which can be chromed with a gloss or satin finish or painted with epoxy powders.

Wood

Wood is a renewable raw material. All products derived from wood, such as for example plywood, have the advantage of being able to be machined more easily than wood and do not deform. The timber we use – solid or plywood – comes mainly from European and Russian forests and is seasoned to specific values of humidity with tests. Most of the structures of the products in the collection have a frame in solid pine or ash, or in beech or poplar plywood.

Recyclability

All Stone elements are 100% recyclable when fully separated. Tacchini undertakes on-going research and development, with efforts made to introduce products which are a perfect combination of function and safety without jeopardizing the final design of the same articles. During production attempts are made to minimize noise and emission levels and to reduce rejects as far as possible. All the single materials which make up the production process, once disassembled, can be reused several times, maintaining a high quality standard.

Packaging

Stone element is dispatched already assembled. It is protected by tissue paper and cellophane to protect the covering from dust and direct contact with the cardboard. The product is packed in rigid cardboard boxes suitable for world export. Manufacture of the packaging observes the criteria for recovery both as recycling and energy recovery and composting.

Once a product reaches the end of its life cycle it has to be eliminated.

Pearson Lloyd

Pearson Lloyd is one of the leading names in contemporary British design, and this multidisciplinary studio works in a wide range of sectors: from furnishing to public spaces to brand development. Established by Luke Pearson and Tom Lloyd in 1997, the studio has received numerous acknowledgements and accolades in both Europe and the United States. The British design duo write regularly for major design magazines, as well as acting as “visiting lecturers” at the École Cantonale d’Art in Lausanne.

Selected projects:

The Fourth, Tafelrond Hotel
(Leuven, Belgium)

CJ Corporation, CJ Blossom Park
(Seoul, South Korea)

Maike Metals Commodity Exchange
Center (Xi’an, China)
