## TRUFEL™ HC2PCh

**Elanco US**

**Feline Rhinotracheitis-Calici-Panleukopenia-Chlamydia Psittaci Vaccine**

Killed Virus, Killed Chlamydia

For use in animals only

This product has been shown to be effective for the vaccination of healthy cats 8 weeks of age or older against feline rhinotracheitis, calici, panleukopenia viruses and feline *chlamydia psittaci*. The duration of immunity for this product has not been established. For more information regarding efficacy and safety data, go to [productdata.aphis.usda.gov](http://productdata.aphis.usda.gov).

The vaccine contains one additional feline calicivirus strain isolated from one hemorrhagic calicivirus outbreak that occurred in 1998 and was shown to be effective against calicivirus induced hemorrhagic disease in controlled vaccination challenge experiments.

**Dose:** Inject one 1 mL dose subcutaneously using aseptic technique. Healthy cats should receive two doses, 3 to 4 weeks apart, except that if the animal is less than 16 weeks of age, then the final dose should be given no earlier than 16 weeks of age. The presence of maternal antibody is known to interfere with the development of active immunity in cats and additional boosters will be required in most young animals. The need for annual booster revaccinations has not been established for this product. For advice on revaccination frequency and annual booster vaccinations, consultation with a veterinarian is recommended.

**Caution:** In the absence of a veterinarian-client-patient relationship, Federal law prohibits the relabeling, repackaging, resale, or redistribution of the individual contents of this package.

**Caution:** Store in the dark at 2° to 8°C (35° to 46°F). Avoid freezing. Shake well. Do not mix with other products, except as specified on the label. This product has not been tested in pregnant animals. In case of anaphylactoid reaction, administer epinephrine. In case of human exposure, contact a physician. Thimerosal, neomycin, polymyxin B and amphotericin B added as preservatives.
