Dominant 7ths exercise

When first doing this exercise play legato at a slow tempo and take breaths where needed.

As you gain confidence and speed keep the tempo steady using a metronome, and breathe only once per line. Always play this as legato as possible, do not sacrifice smooth transitions for speed.

It is permitted to slow the tempo for more difficult key areas.

Where possible the lower patterns may also be played up the octave.

Once you are familiar with the pattern play from memory, starting at a different place in the cycle each time.
