### Bra Size Guide

To find your perfect bra fit there are two measurements that together calculate your perfect bra size. The number on your bra size decides by your underbust measurement and the difference between your chest width and underbust width calculates your cup size.

1. Measure your chest width:  
Measure your chest where you're the widest.

2. Measure your underbust width:  
Measure your underbust directly under your bust, as tightly as possible.

Cup Size	A	B	C	D	E	F	G
Difference	12-14	14-16	16-18	18-20	20-22	22-24	24-26

Calculate thereafter your cup size by taking your:  
Chest width - Underbust width = Cup size

For example:

If you have a chest width on 93cm then you're a size 40. With an underbust width of 78cm. It gives you a difference of 15cm and looking at the table above it shows that you have a B-cup.

Your bra size is then 75B.
