

FLOATING TABLET DISPENSER

Directions for Use:

1. Unscrew cap (C).
2. Rotate sleeve (B) to set desired relative release rate.
3. Tighten lock ring (A) against sleeve (B).
4. Fill with sanitizer tablets. NEVER mix bromine and chlorine tablets together in a dispenser.
5. Replace cap (C).
6. Place in water. For even greater release rate, invert dispenser underwater to allow air to escape.

Most people start with a setting of about 3 or 4. Check water sanitizer level after 24 hours with test strips, and periodically thereafter. Adjust relative feed rate setting to a higher or lower number as necessary, to achieve your desired sanitizer level. NOTE: Setting numbers are relative, not PPM.

WARNING

This dispenser is designed for use with bromine or trichlor tablets only. Do not mix different chemical types. Do not mix with calcium hypochlorite. FIRE OR EXPLOSION MAY RESULT. This is not a toy. Remove from water when spa or pool is in use. KEEP OUT OF REACH OF CHILDREN.
