## $\frac{ThermoF/Oat}{\text{SPA BLANKET}}$ Directions for Trimming and Use

- 1. Using a tape measure, determine your spa's inside surface dimensions at the waterline.
- 2. Add about 2" to each dimension and record below:

Length + 2":	
Width + 2":	

**NOTE:** Cutting the blanket about 2 inches larger helps keep it from shifting during the hot tub's filtration cycle.

- 3. Now lay your new ThermoFloat blanket, bubble-side down, onto a flat surface such as your lawn or indoors on a floor.
- 4. Mark the above dimensions on the smooth side of the blanket, using a marking pen.
- 5. Using scissors, trim to rough size, length and width.

- 6. Now place the roughly-trimmed ThermoFloat blanket in your filled spa, bubble-side down.
- 7. Using the marker, trace around rounded corners and any other spa features requiring a cutout or additional trimming.
- 8. Trim again as needed with scissors.

## **Cleaning**

Every month or two, clean both sides with ecoTUB Spa Clean non-foaming cleaner. Then rinse with a garden hose and place back in spa, bubble-side down.

**WARNING:** Do not get on top of or swim under the floating blanket. Remove the blanket prior to using hot tub.
