

1

Gently wipe dust or debris off the lens surface using a soft cloth.

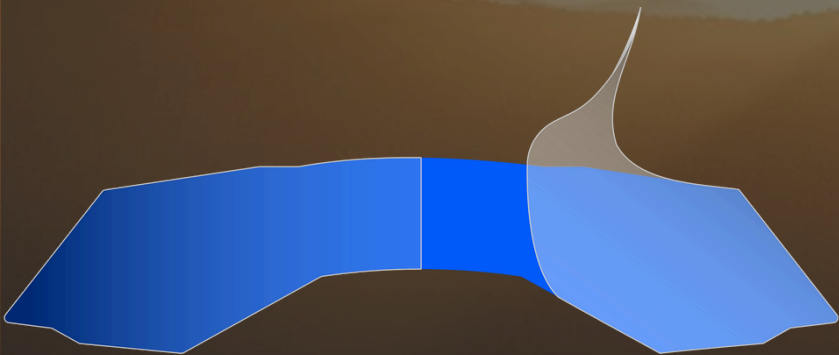

2

Remove the white protective film from the back of the lens protector.

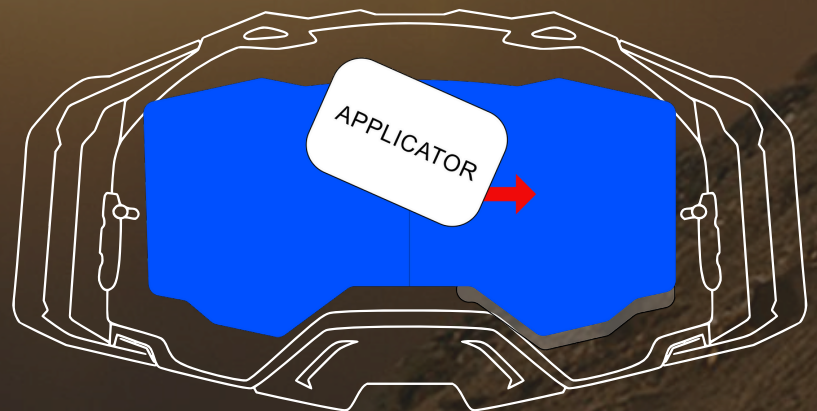

3

Slightly separate one side of the screen protector

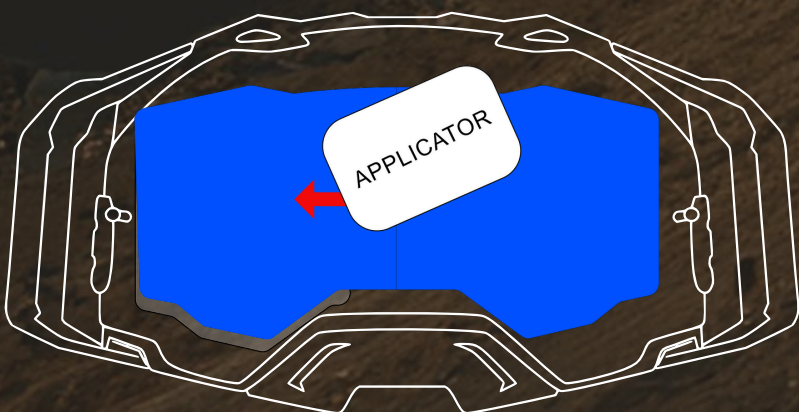

4

Align the lens protector with the lens. Slowly peel back the right side and use an applicator (or a credit card) to press it down, removing any air bubbles.

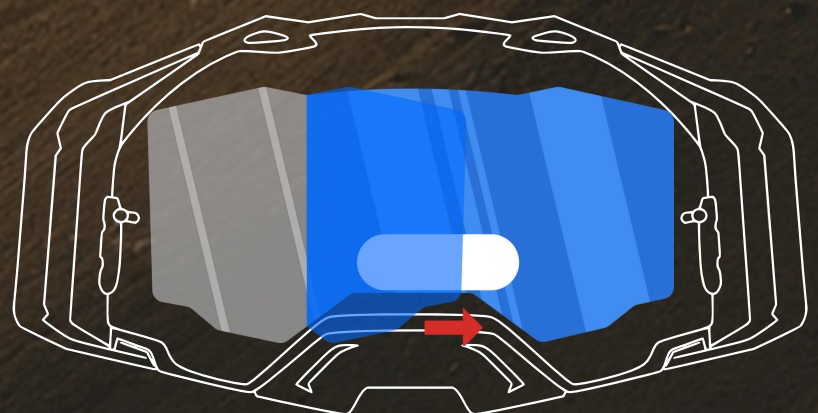

5

Repeat the same process for the left side of the lens protector.

6

Once both sides are securely attached, smooth out any remaining air bubbles while peeling off the blue protective film.

7

Remove the blue protective film, then wipe the goggle lens again with a soft cloth
