Better Chemicals at HALF the Price!

MADE IN THE USA

XE1 GENERAL-PURPOSE CLEANING AGENT

Versatile cleaner for non-porous surfaces. Ideal to prepare laminated panels. Removes fingerprints, light oils, light glue residue, and saw dust. Helps remove streaks and smudges. Use it for other surface cleaning, too. Great on countertops and work areas. Dries quickly and cleanly.

XE2 EDGEBAND GLUE SEPARATING AGENT

Fast-acting. Prevents and removes unwanted hot glue adhesion from laminated panels. Spray it on the tops and bottoms of laminated panel surfaces to help reduce glue residue. Wipe on later by cloth to remove excess glue and spatter from panels and machine surfaces.

XE3 EDGEBAND ANTI-STATIC AGENT

Prevents static clinging of edgeland chips and sawdust during machine banding. Very useful and versatile, compatible with most hot glue spray systems. Dries quickly and cleanly. Also doubles as a good all-around cleaner for machines and panels in the shop.

XE4 EDGEBAND FINISHING AGENT

Great final cleaner for non-porous surfaces. Removes previous washes or wiping from other chemical agents. In machine spray systems, aids cooling the glued tape and joint. Helps to give final trimmed and buffed edgeland renewed shine. Remove streaks, smudges, and light glue residue when wiped on by cloth.

XE4 EDGEBAND FINISHING AGENT TOWELETTE WIPES

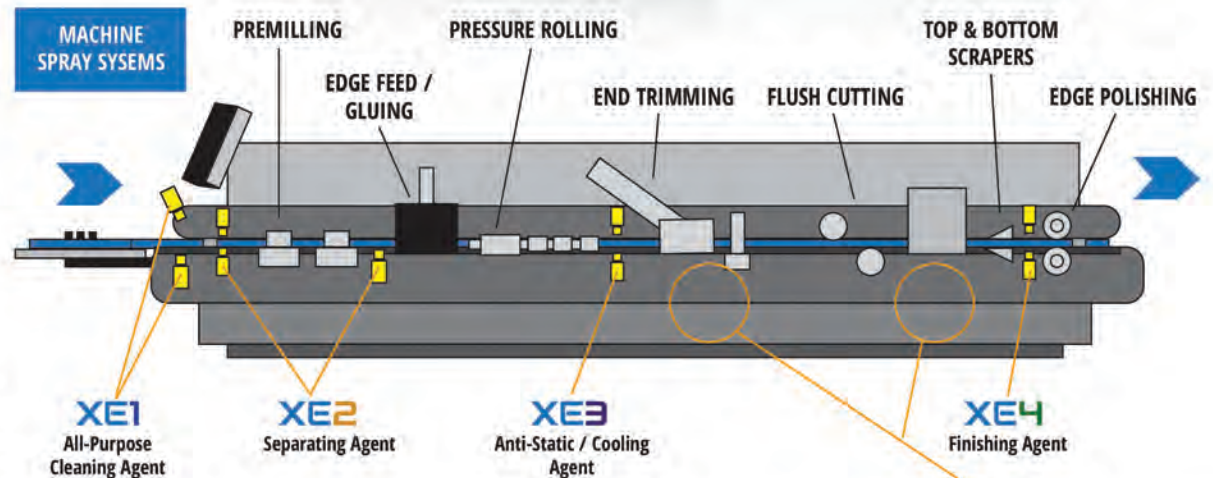

Flip-top box with 250 pre-soaked cloth wipes. Get more controlled use of cleaners in your shop, no bottles to spill or store. Installers will rave about not having to lug bottles of liquid cleaners on the job site!

XE5 MACHINERY CLEANING TOWELETTE WIPES

XE5 is great for loosening and removing EVA glue splatter from your edgeland machines or removing heat-trapping dust and grime build-up on spindles and drives. Comes in a flip-top canister with 250 pre-soaked cloth wipes. Dries quickly cleanly in use.

“Made in USA got my attention, the way it really shines in my production keeps me coming back.”
