

MITICO

Mitico is a fully customizable seating system with the child already seated and, in daily adjustments, without the need to use any tools. Mitico is suitable, in the two sizes, for children aged 3 to 12 years.

The sitting unit is modular and offers multiple adjustment options that allow the rehabilitator to conform, even during the growth of the child, the different surfaces to the specific physical and functional needs of the child. Mitico is available in two versions, Simple with the front of the seat support in a unique platform and Expert with separated coxo-femoral supports, independently adjustable to allow a more appropriate position to cope with problems of limb-length discrepancy or a deformity structured pelvis.

Mitico Expert

The Expert version has coxo-femoral supports that can be customized independently in width, depth and abduction; the supports allow to easily find the right position even in the case of important asymmetries or discrepancies, preventing the onset or aggravation of pathological postures and maintaining a comfortable abduction of the lower limbs, avoiding the use of the traditional retractor wedge.

The set of coxo-femoral supports and the seat tilting system helps stability by counteracting the forward sliding of the pelvis.

Mitico Simple

Mitico Simple has a whole seat surface, adjustable in depth. The seat has an adjustable configuration, easily customisable to adapt to the shape and the abilities of the child who, with a feeling that he is sitting in a stable and well-contained manner, is encouraged to act and interact. Each adjustment can be made using the practical screws with the child already seated.

The seat has the necessary fittings for the addition of other accessories and various models of belt, thus creating a "modular" system that can also be modified over time.

Important details

The angle of the backrest has its fulcrum close to the physiological one and also enables a comfortable and reassuring postural attitude, thus facilitating control of the head and trunk, movements of the upper limbs, and hand-eye coordination.

The armrests are adjustable in height and follow the inclination of the backrest.

With Mitico... always!

- **DENTRO** frame is ideal for indoor use thanks to its small size. The seat height ranges from 38 to 52 cm. Its special shape "X" facilitates the approach to the child from all sides, maintaining contact.
- **HIGH LOW** frame, for indoor use, can adjust the seat from 23.5 cm up to 60.5 cm.
- **FUORI** frame, also for outdoors use, even on very uneven ground, thanks to large wheels and shock absorbers. Easily foldable, its compact size means it can move around in all environments and pass through every kind of door. The push bar is adjustable for tilt and is equipped with a parking brake. The special X-shape of the legs allows you to get close to the child.

Accessories: compose your configuration!

Code 873126
Neck rest, adjustable for height, forwards/backwards, tilt, and laterally.

Code 873127
Posture adjustment headrest. Adjustable for height, depth, tilt, and laterally.

Code 873128
Wing side adjustable headrest. Adjustable for height, depth, tilt, and laterally; aluminium frame, easy to shape.

Code 873129
Head rest - simple. Adjustable for height and depth.

Code 873135-6 Fixed
Chest supports, adjustable for height and width.

Code 414101N-02N
Vest

Code 414201N-02N
Butterfly vest
