Primobolan Depot 100mg/ml. Primobolan Depot, is an androgen and anabolic steroid (AAS) medication which is used mainly in the treatment of anemia due to bone marrow failure. It is given by injection into muscle. Primobolan is an oral anabolic steroid that is a little unique compared to many oral anabolic steroids. Primobolan dosage and cycles. The ideal Primobolan dosage for men is approximately 200-400mg per week, or 50-150mg per day (if you're competing). For women, this is dramatically less at just 50-100mg a week (although some studies suggest 25-75mg per day is safe). Tips :

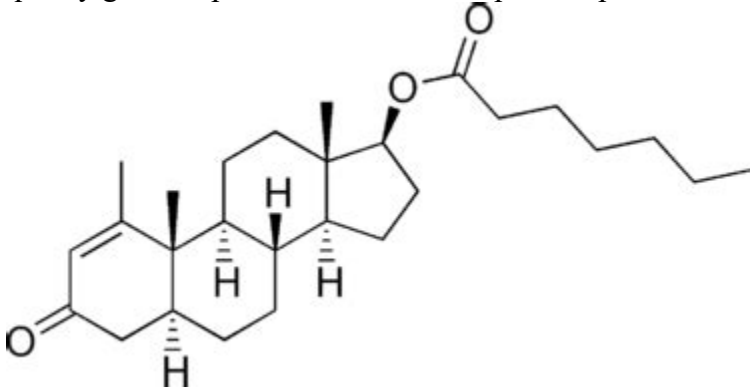

When used medicinally, Primobolan Depot doses normally start at 200mg per week and then reduce to 100mg week after a little time has passed. 100mg per week is generally continued for a decent amount of time, but in some cases is reduced to 100mg every two weeks. Primobolan Depot has been very successful in treating osteoporosis, sarcopenia and.

Primobolan is a moderate injectable anabolic steroid with a delayed effect. It is moderately anabolic and not very androgenic. The effects of Primobolan are mostly similar to those of Primobolan tablet: moderate anabolic effect, moderate muscle gain, but of quality. Laboratory: Euro Pharmacies, Form: Injectable, Molecule: Methenolone Enanthate, Concentration: 100mg / ml, Presentation: Vial of. [read this](#)

Primobolan Depot

(Methenolone Enanthate) Methenolone is an anabolic androgenic steroid that was first released in 1962 by Squibb under the trade name Nibal (oral) and Nibal Depot (injectable). This was a very short-lived product on the U.S. market and by the mid-1960's the German pharmaceutical powerhouse Schering would own all rights to the. [super fast reply](#)
