

# PROFESSIONAL GRINDING MACHINE MONSTER MACHINE

Professional machines for **grinding, polishing** and **cleaning** all types of civil and industrial floors.

# ALL THE ADVANTAGES OF OUR MACHINES

## System divided into 3 parts

The quick release system allows you to divide the sander into 3 parts: handle unit, motor unit and planetary unit.  
Ideal weight for easy transport and loading / unloading operations without excessive effort.

**HANDLE GROUP**  
**ENGINE GROUP**  
**PLANETARY GROUP**

incorporated vacuum system  
in the carcass or separated with  
**vacuum shroud**

## Overturning of head

A practical head tilting system makes the combination of tools easy and comfortable.

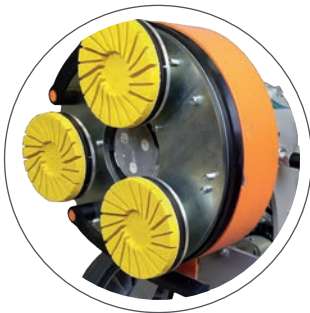

It can be used working either forward/backward or right/left with the wheel support, **or in swing mode** with a simple release action.

**Gear plate in tempered steel**

## Multifunction sander

The MONSTER MACHINE MM44 - MM40 is a **multifunction sander** equipped with GEARPLATE ideal for **leveling, sanding and polishing** of civil surfaces of all kinds such as concrete, marble, granite and natural stone. Ideal for removing resins, paints and adhesives.

## Light structure

Light but solid structure with **oversized wheels** that does not allow easy movement, with the possibility of working both as a single disc machine and as a sander.

## Locking pin between the wheels

The presence of a locking pin between the wheels and the casing allows you to **switch from the single-brush mode with wheels on the ground to the swing mode with raised wheels.**
