

# Aqua-Mate® II

*Multi-Purpose Wetting Agent*

LUBRICANTS FOR  
A HEALTHIER  
PLANET

## Make the most of your irrigation and spraying time.

You know how important irrigation and the proper use of agrichemicals are to your crop production, so how can you optimize your spraying and irrigation? Aqua-Mate II is a concentrated surfactant designed to make your growing and harvesting operations more successful. Aqua-Mate II drastically lowers the surface tension of water, for greater saturation of dry soil and greater penetration of root systems and leaves while limiting water run-off. It also aids in mixing agrichemicals in water and keeping them in suspension, making them more effective, preventing spray nozzle deposit buildup and offering the potential for lower overall chemical usage expense. Aqua-Mate II promotes uniform droplet size in sprayers and sprinkler systems for more even coverage and minimal misting or drift.

### BENEFITS

- Improves solubility of fertilizer and agrichemicals in water
- Improves soil penetration and root contact
- Reduces water usage, lowers run-off and keeps soil wet longer
- Reduces misting, drift and clogged spray nozzles
- Safe for use on crops
- Excellent for sprinkler systems, tractor sprayers, pump sprayers and aerial spray application

Aqua-Mate II improves mixing and dispersion of agrichemicals in the tank at a super-low treat rate of 1/2 pint (8 oz.) per 100 gallons of water.

Aqua-Mate II prevents nozzle deposits and promotes uniform droplet sizes for even coverage and minimal misting or drift, leading to proven water usage reductions up to 53%.

Aqua-Mate II improves soil & root absorption by up to 115%, and has shown 32% better flow rate into parched soil and plants.

**Make your aerial spray applications more accurate and efficient with Aqua-Mate III!**
