

# USER MANUAL

REINFORCED  
AND ULTRALIGHT

## EMERGENCY TARP MULTI-USE 4 SEASON

### HOW TO USE IT

• Choose a safe location and lay out the tarp. The addition of an insulating mattress and an empty backpack will provide more comfort for the victim.

**Skis can be placed inside for added rigidity but are not necessary and may damage the lightweight tarp.**

**Tip: Protect the edges well with the climbing skins.**

• Place the victim in the middle of the tarp and close it using the velcro, leaving an opening for the face.

• Pass the red cordolette in the **small red** eyelets like you would lace a shoe, through the bottom. See illustration.

**Tip:** It is also possible to use ski straps (64cm to 90 cm) to secure the victim and close the tarp;

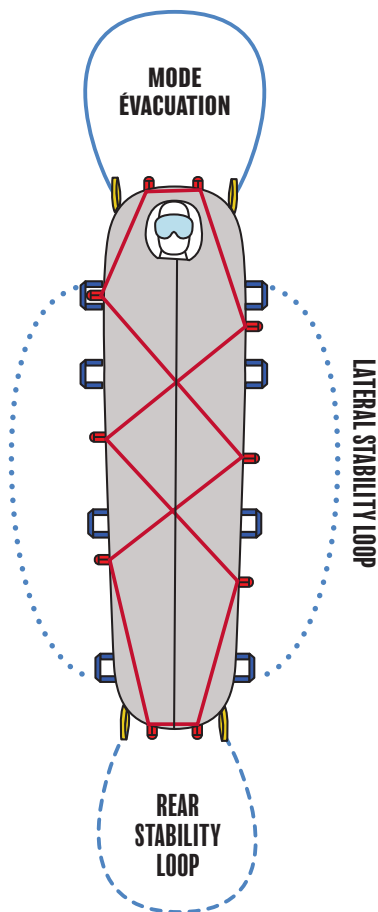

• Cut the **4mm cordolette** in several sections as required by your hauling plan.

• Install the traction system by passing a section of the **4mm cordolette** through the two front **yellow loops**.

• Install the rear stabilization system by passing a second section of **4mm rope** through the two rear **yellow strap loops**.

• If you need to sidehill, install the Lateral stability loop balancing system as shown on the right.

**The tarp can also be used as an emergency bivy or survival blanket with its velcro closure.**

### WARNINGS

**WHEN EVACUATING IN EXTREME TERRAIN:** SECURE the victim with appropriate equipment to restrain the victim in case of traction system failure.

**DO NOT** use the red eyelets or blue handles for traction.

**THIS IS AN EMERGENCY TARP MADE OF FABRIC.** Using it on abrasive surfaces, rocks or over branches can damage the fabric and even tear it.
