

116 Gear hangers

A removable gear hanger is a small part which can be found between your rear mech and your frame. In case of an accident, it's designed as a weak point to bend or even break off if necessary to protect your frame.

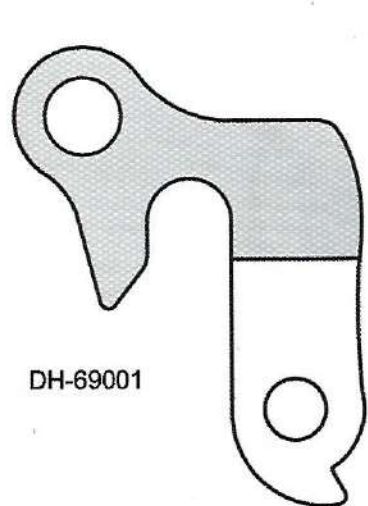

We have selected the 164 most popular gear hangers to help mechanics to quickly replace damaged gear hangers.

- for minimising damage to your bike frame and rear derailleur in the event of an accident
- lightweight and easy to fit
- designed to fit a wide range of bikes - please see compatibility list below
- all our gear hangers are made to the equivalent quality as the original parts (OEM quality i.e. cold forged aluminum alloy 6061)
- sold with a pair of bolts
- blister carded

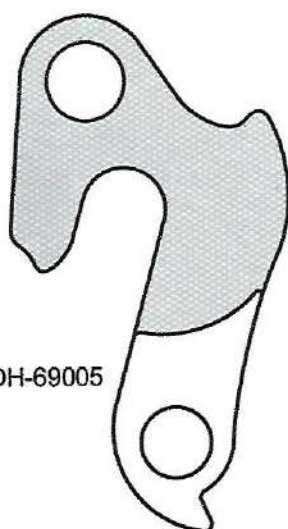

Please compare your hanger to the drawing at actual size (scale 1/1) to ensure the correct fitting.

For further information about gear hanger compatibility, please visit our web site at :

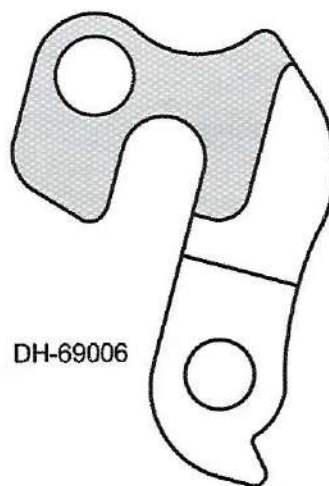

www.vartools.com/en/derailleur-hangers.php and browse our compatibility chart of gear hangers.
