

MENTION BIOLOGIE ET ECOLOGIE VEGETALES

Laboratoire de Palynologie

Reference : presumed as « eucalyptus honey »

Qualitative pollen analysis (pollen spectra)

Taxon (plants name)	Frequency %
<i>Eucalyptus</i> spp.(kininina)	91,42
<i>Erica</i> sp.(anjavidy)	3,33
<i>Taraxacum officinale</i>	1,90
Aster-type	1,90
<i>Mimosa pudica</i>	+
Non determined	3,80

+ less than 1%

Quantitative pollen analysis (number of grains per 10g of honey)

N= 275 448 grains classe III

Interpretation

Unifloral (= monofloral) honey from eucalyptus (91,42% ; high pollen content) with organoleptic characteristics of the honey-type: creamed honey, flavour
