2022

10.3 million
native trees planted

550+
forests created

10,343
hectares revegetated

4.4 million
tonnes of carbon
will be sequestered

**GROWING
HOPE**

Greenfleet acknowledges the Traditional Custodians of the land, seas and skies throughout Australia and pays respect to their Elders, past and present.

In particular, we recognise their deep connection to Country and honour their knowledge and wisdom in caring for it.

We respect that we are working with, and learning from, the oldest continuous cultures and longest standing land managers on Earth.

There is no climate action without Reconciliation. We will continue to listen and continue to learn as we work towards a better future.

Together, we can grow climate hope.

About Greenfleet.

Greenfleet is a leading Australian not-for-profit environmental organisation protecting our climate by restoring our forests.

We plant native biodiverse forests to capture carbon emissions and help fight the impacts of climate change.

Greenfleet is Australia's first carbon offset provider and since 1997 has planted over 10 million trees creating more than 550 forests in Australia and New Zealand.

Our forests are legally protected for up to 100 years, conserving biodiversity, improving the health of our soils and waterways, and restoring habitat for wildlife, including many endangered species.

Greenfleet grows forests and climate hope by empowering people to take tangible and long-lasting environmental action.

The transformation of our forest at Battery Creek on Boon Wurrung Country in Gippsland, Victoria. Revegetated between 1999 and 2009, the second photo was taken on a site visit in 2022.

CEO's message

2022 was an important year for Greenfleet as we celebrated 25 years of delivering climate action: removing carbon, restoring nature and indigenous reconciliation.

We planted our 10 millionth tree and have now revegetated over 550 forests that will capture over 4 million tonnes of carbon across their lifetime. We have now restored a total of 10,300 hectares to legally protected native forest and in 2022 this includes 362 hectares of koala habitat.

In 2022, we started the restoration of Glendalough, a Greenfleet owned property on Boon Wurrung Country in South Gippsland. Demonstrating how climate action and sustainable agriculture can coexist, half of this 240-hectare property is being revegetated while the other half is being used for regenerative farming.

We now own 6 properties in South Gippsland, expanding on our extensive work in the region. Two newly purchased properties will connect to Greenfleet's establishing forest at Wurneet Laang Laang and create a 3.5-kilometre habitat corridor for Strzelecki Koalas and other vulnerable species.

Further north in the iconic Noosa Hinterland, Greenfleet completed the first of our commitments under the Indigenous Land Use Agreement with the Kabi Kabi Peoples Aboriginal Corporation. We are working closely with the GPT Group, our principal project partner, to continue delivering this landmark project.

Greenfleet also continued revegetation work in New Zealand and established opportunities for our work to expand with local supporters in the coming years.

Looking to the future, we developed Greenfleet 2030, a strategy to guide our actions through the rest of this decade with a vision to offset 10 million tonnes of carbon in that time.

Amidst major market upheaval, our approach to carbon offsetting and ecosystem restoration continues to be recognised as best practice. In 2022, Greenfleet received endorsements in the Australian Financial Review and from industry experts, including a senior researcher with the Australia Institute's Climate and Energy Program.

We have further developed our relationships with Indigenous communities including the Kabi Kabi people of Queensland's Sunshine Coast, the Boon Wurrung people of Victoria's South Gippsland and the Djaara people of Central Victoria.

To our Supporters, Board, Business Advisory Council, Partners, and Staff – thank you for being a part of the Greenfleet community. Together, we are growing our forests and growing climate hope.

Warm regards,

Wayne Wescott
CEO, Greenfleet

United Nations' Sustainable Development Goals

Greenfleet's work helps achieve the United Nations' Sustainable Development Goals (SDGs). By taking climate action with us, you are contributing to the following goals.

“Take urgent action to combat climate change and its impacts”

The impacts of climate change are now being felt across every continent and the need to combat these issues is becoming increasingly urgent.

The biodiverse, native forests that Greenfleet restores contribute directly to SDG 13. Greenfleet's forests remove carbon from the atmosphere to actively fight the impacts of climate change.

[Read more about our fight against climate change >](#)

“Protect, restore, and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss”

In addition to capturing carbon, Greenfleet forests build resilient ecosystems, which help restore biodiversity and improve land quality.

By reconnecting and extending existing habitat, we are giving native species the best chance of thriving with safe areas in which to breed and live. We legally protect our forests for up to 100 years and closely monitor them to ensure they can establish self-sustaining ecosystems and provide habitat for decades to come.

[Read more about Greenfleet's work restoring habitat >](#)

“Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all”

Each year, Greenfleet invests over \$1 million into regional economies through our revegetation operations by buying, hiring, and sourcing locally from seed collectors, earth movers, tree planters, weed management teams and indigenous plant nurseries.

[Read more about our investment in regional economies >](#)

Other SDGs that Greenfleet's work contributes to include:

[Click to read more >](#)

Our impact: 2022

In 2022, Greenfleet restored native forests across **408 hectares** in Australia and New Zealand to remove **448,452 tonnes** of carbon over their lifetime.

This is equivalent to removing over **104,000** average cars from Australia's roads for a whole year.

2022 planting projects

Yurol Ringtail

(QLD)

Kabi Kabi Country

In 2021, Greenfleet entered into a landmark Indigenous Land Use Agreement with the Kabi Kabi Peoples Aboriginal Corporation. Our revegetation work is restoring approximately 1,100 hectares in the Noosa Hinterland.

Restoring Country for Climate, a GPT nature positive initiative in partnership with Greenfleet and Traditional Owners, brings together climate action, reconciliation, and restoration of critical koala habitat.

The social and cultural benefits for the Traditional Owners, the Kabi Kabi people, are verified by the Aboriginal Carbon Foundation. As well as helping deliver economic benefits to the Kabi Kabi people, this project is restoring vital habitat for species including koalas and Greater Gliders.

[Read more about Yurol Ringtail >](#)

Cherry Gully & Avon

(QLD)

Yuggera Country

Located north-west of Brisbane, Greenfleet is restoring over 250 hectares of native ecosystem across these two properties. Revegetation works began here in 2022 and Greenfleet will continue restoring the riparian and floodplain ecosystems throughout 2023.

This project will provide extensive wildlife habitat along the Cherry Gully riparian corridor, particularly for koalas, which are listed as endangered in Queensland. With existing koalas confirmed on the property, this work will extend habitat and food sources for the species.

By restoring native forest along Cherry Gully, Ivory Creek and Brisbane River Catchment, this project will also improve water quality.

[Read more about Cherry Gully >](#)

Spurfield Road

(NSW)

Bundjalung Country

In the Northern Rivers region of NSW, Greenfleet's revegetation project at Spurfield Road will support local wildlife. Predominately focused on restoring subtropical rainforest species, some eucalypt species included in the planting will provide potential habitat and food sources for koalas.

In addition to restoring habitat for endangered wildlife on the upper slopes of the property, subtropical rainforest species are being restored on the lower parts.

Through the restoration of alluvial and riparian zones on the property, Greenfleet's work will also help improve water quality within the Wilsons and Richmond River catchments.

[Read more about Spurfield Road >](#)

Aroona (QLD)

Yuggera Country

Located in the Little Liverpool Range of South-East Queensland, Aroona is a working cattle station. This project demonstrates how sustainable agricultural practices can coexist with effective climate action and ecosystem restoration.

Alongside Greenfleet's traditional planting methodologies, an ecological cool burn was undertaken to create a patchwork of burnt and unburnt areas. This process stimulates the existing landscape and helps lay the groundwork for complex, biodiverse ecosystems to establish as the seeds germinate. Aerial seeding was also used to plant seed directly into the ash bed.

As well as delivering climate action, this forest will grow to extend habitat for species such as koalas, the Glossy Black Cockatoo, Grey-headed Flying Fox, and Brush-tailed Phascogale.

[Read more about Aroona >](#)

Glendalough (VIC)

Boon Wurrung Country

In the rolling hills of South Gippsland, vast parts of this 240-hectare farm are being returned to native forest. The property is adjacent to remnant native vegetation and will provide an important habitat link for Strzelecki Koalas and native birds such as the Yellow-faced Honeyeater and Grey Fantail.

Located at the headwaters of the Tarwin River Catchment, Glendalough's revegetation will also minimise land lost to erosion and enhance water retention. This will also help a number of riparian and freshwater species found in the region.

With a working farm operating on parts of this property, this revegetation project demonstrates the potential for sustainable agriculture to go hand in hand with climate action.

[Read more about Glendalough >](#)

Kinglake Distillery (VIC)

Wurundjeri Country

By restoring land at a working whisky distillery, this project demonstrates how sustainable businesses can build climate action into their practices. This ecosystem restoration project will capture carbon, improve biodiversity, and support local wildlife.

A variety of native birds including Sulphur-crested Cockatoos, Powerful Owls and King Parrots will utilise this forest as it grows. Other species already found in the area include the Sugar Glider, Common Wombat and Short-beaked Echidna. The proximity of this project to Kinglake National Park means it will also help provide a habitat steppingstone to this existing vegetation.

Eucalypts were planted to form the canopy of this forest and as they grow, they will assist Greater Gliders, which were sadly listed as endangered in 2022. Greater Gliders feed on eucalypt leaves and use the natural hollows for nesting and shelter as the trees age.

[Read more about Kinglake Distillery >](#)

Te Muri (NZ)

Puhoi, New Zealand

Located north of Auckland in New Zealand, Te Muri overlooks Mahurangi Harbour. Greenfleet has partnered with Auckland Council on this project since 2016 and in 2022, we continued the revegetation of this site to restore its unique biodiversity.

With the steep rolling hills of Te Muri, this project assists in the protection of the creeks and gullies of the park. Located within the Hungry Creek and Puhoi River catchments, the revegetation with indigenous species is helping to reduce erosion and improve water quality as it flows into these important waterways.

The vulnerable Northern New Zealand Dotterels and Variable Oystercatcher are among the many species of native wildlife that find shelter in the remnant vegetation of this area. By expanding the forest, Greenfleet is helping to extend habitat for species of conservation-significant wildlife.

[Read more about Te Muri >](#)

Upcoming projects

Bromfield Road

(VIC)

Boon Wurrung Country

Adjoining Lang Lang River in South Gippsland, this project aims to create a considerable biodiversity linkage by connecting to Greenfleet's establishing forest at Wurneat Laang Laang. This revegetation work will provide critical habitat for the Swift Parrot and Strzelecki Koala. It is also a restoration opportunity for the critically endangered Strzelecki Gum (*Eucalyptus strzeleckii*), a tree species endemic to this unique area.

Bull Creek

(SA)

Ngarrindjeri Country

Located 1 hour north of Adelaide, Greenfleet will be restoring an endangered ecosystem across 15-hectares of this property. This work will create habitat for rare and endangered wildlife species such as the endangered Southern Brown Bandicoot, the critically endangered Southern Emu-wren and the vulnerable Yellow-footed Antechinus.

Harmony Way

(VIC)

Dja Dja Wurrung Country

Located in Central Victoria, this site was previously cleared for grazing. Across this property, Greenfleet will be restoring Low Rise Grassy Woodland, a vegetation community listed as vulnerable. While delivering climate action, this forest will build and extend habitat for species such as the Squirrel Glider, Regent Honeyeater and Brush-tailed Phascogale.

Upcoming projects (continued)

Ivory Creek (QLD)

Yuggera Country

Located north-west of Brisbane, Greenfleet will return in 2023 to continue the restoration of the riparian and floodplain ecosystems across this large property. With existing koalas confirmed on the property, this work will extend habitat for the species listed as endangered in Queensland. The native restoration along Ivory Creek will also improve water quality and reduce erosion in this section of the Brisbane River catchment.

Lyrebird (VIC)

Kurnai Country

Located in Boolarra South, this property will build on Greenfleet's work in the Gippsland region. Previously cleared for grazing, this property will be revegetated to deliver climate action and create wildlife habitat. Species that will benefit from this work include koalas, the Swift Parrot, Gang-gang Cockatoo, and Greater Glider, an endangered species that has been heavily impacted by land clearing.
