

## **Our mission**

To sequester carbon, in all its practical and economically viable forms, but primarily by planting biodiverse native forests in Australia and New Zealand. These carbon sequestration activities aim to reduce the detrimental impact our environment has endured, and to create a sustainable environmental future, including providing habitat for native fauna. To undertake this in such a way that our supporters and clients feel connected to the environment and are empowered to help protect and restore it, for future generations.

## **Our vision**

To become the leading environmental organisation empowering individuals, communities, and companies to take tangible, effective and long-lasting environmental action, to mitigate the impacts of a changing climate, and to restore degraded ecosystems.

The restoration of our forest called Whitehurst on Boon Wurrung Country in Gippsland, Victoria.

## CEO's message

In 2021 Greenfleet continued our commitment to growing hope by taking sustainable and impactful climate action

We remained focused on protecting our climate and have now restored 540 native forests that will sequester more than 3.9 million tonnes of carbon emissions through the rest of this century.

This year, Reconciliation Australia formally approved our Reconciliation Action Plan recognising our dedication to work in this space.

By entering into an Indigenous Land Use Agreement with the Kabi Kabi people, Traditional Owners of Queensland's Sunshine Coast, we made strides toward a momentous project, which will restore over 1,100 hectares in the Noosa Hinterland.

Through this unique project, we are thrilled to take climate action, restore critical koala habitat, and support the economic and cultural objectives of the Kabi Kabi people.

In Queensland, we also continued our exploration of blue carbon methodologies and commenced an innovative approach to rainforest restoration in the Daintree.

In Victoria, we purchased three properties in South Gippsland to continue our extensive revegetation work in this region and exploration of soil carbon methodologies. We are thrilled to have planted more than 120 hectares of legally protected koala habitat across eastern parts of Australia. Koala populations were severely impacted by the 2019/20 Black Summer Bushfires making habitat restoration a critical part of Greenfleet's work.

We also established new ways to memorialise important life events with the introduction of Milestone Forests. In 2021, we planted more than 30 hectares of these forests to help our supporters honour significant moments.

In 2022, Greenfleet will mark 25 years of taking climate action. As we look forward to this milestone, I reflect on how we will continue to protect our climate through the rest of this decade, century and beyond.

I would like to thank our supporters, partners, Board of Directors, Business Advisory Council and staff for their continued efforts throughout 2021. I look forward to growing climate hope with all of you into the future.

Warm regards,

Wayne Wescott

CEO, Greenfleet

## **United Nations' Sustainable Development Goals**

By taking climate action with Greenfleet, you are contributing to the United Nations' Sustainable Development Goals (SDGs), which Greenfleet's work helps achieve.

Take urgent action to combat climate change and its impacts

The impacts of climate change are now being felt across every continent on Earth and the need to combat these issues is becoming increasingly urgent.

The biodiverse, native forests that Greenfleet plants contribute directly to SDG 13. Greenfleet's forests draw down on carbon in the atmosphere and actively fight the impacts of climate change.

Read more about our fight against climate change >

Protect, restore, and promote sustainable use of terrestrial ecosystems, sustainably manage forests and combat desertification, and halt and reverse land degradation and halt biodiversity loss

In addition to capturing carbon, Greenfleet forests build resilient ecosystems, which help restore biodiversity and improve land quality.

By reconnecting and extending existing habitat, we are giving native species the best chance of thriving with safe areas in which to breed and live. We legally protect our forests for up to 100 years and closely monitor them to ensure they can establish self-sustaining ecosystems and provide habitat for decades to come.

Read more about Greenfleet's work restoring habitat >

Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

Each year, Greenfleet invests over \$1 million into regional economies through our forestry operations by buying, hiring, and sourcing locally from seed collectors, earth movers, tree planters, weed management teams and indigenous plant nurseries.

Read more about our investment in regional economies >

#### Other SDGs that Greenfleet's work contributes to include:

**CLEAN WATER** 

Click to read more >

## Our impact: 2021

In 2021, Greenfleet planted native trees across **530 hectares** in Australia and New Zealand to sequester **358,178 tonnes** of carbon over their lifetime.

This is equivalent to offsetting over 26,000 average Australian households.

## Greenfleet planted a mix of endangered and endemic species including:

- Eucalyptus strzelecki (Strzelecki Gum)
- Eucalyptus leucoxylon (Yellow Gum)
- Eucalyptus melliodora (Yellow Box)
- Eucalyptus macrocarpa (Grey Box)
- Eucalyptus tereticornis (Forest Red Gum)
- Melaleuca irbyana (Weeping Paperbark)
- Microseris lanceolata (Myrong)
- Syzygium moorei (Coolamon)
- Themeda triandra (Kangaroo Grass)

## 2021 planting projects

### Aroona (QLD)

#### Yuggera Country

Located in South-East Queensland within the Little Liverpool Range, Aroona is a working cattle station being revegetated to native forest. Demonstrating how regenerative agriculture can coexist with effective climate action, this project is playing an important part in the restoration of ecosystems in the region.

An ecological cool burn was undertaken aiming to create a patchwork of burnt and unburnt areas, which will stimulate the existing landscape and help create complex, biodiverse ecosystems as the seed germinates. Aerial seeding techniques were then used to plant seed into the ashbed.

As well as taking climate action, this forest will grow to provide habitat for species such as Glossy Black Cockatoos and Brush-tailed Phascogales.

Read more about Aroona >

## Dangerbridge (QLD)

#### Kabi Kabi Country

Dangerbridge is an integrated revegetation and grazing property located just north of Queensland's iconic Noosa region.

Demonstrating our long-term commitment to ecosystem restoration, Greenfleet first planted here in 2003, and returned in 2021 to continue restoring this site. As well as capturing carbon, this forest is extending wildlife habitat from the Coloola National Park.

The native forest growing on site is improving habitat connectivity along Kin Kin Creek and enhancing koala habitat and food tree abundance, which is pivotal as koalas are considered vulnerable in Queensland.

Read more about Dangerbridge >

## Falls Road (VIC)

#### **Boon Wurrung Country**

Located in a region with highly fragmented landscape, Greenfleet's reforestation work at Falls Road will be critical in restoring the ecosystems and reconnecting habitat for wildlife.

On this site there are already Swamp Wallabies, koalas and wombats and as this forest grows, it will provide potential habitat for the critically endangered Swift Parrot, which can be found in the region.

Many native tree species were chosen as part of this reforestation project and some specifically for the habitat they can provide. The Blue Gum (Eucalyptus globulus) was included as a habitat tree for both koalas and the Swift Parrot, while Mountain Grey Gum (Eucalyptus cypellocarpa) was planted as it is an important browsing tree for koalas.

Read more about Falls Road >

## Hiddenvale (QLD)

#### Yuggera Country

This unique project allows us to bring together climate action and habitat restoration with research that is exploring how to future-proof restored native forests for a changing climate. Through this project, we are also restoring koala habitat.

This property is adjacent to vegetation that is home to known populations of koalas on the floodplain of the Franklin Vale Creek and Little Liverpool Range. The project will integrate road safety with revegetation design to direct koalas to cross under the road safely.

The work undertaken at Hiddenvale will also provide habitat for Sugar Gliders and other small marsupials.

## Arnups Road (VIC)

#### **Boon Wurrung Country**

Located in the Battery Creek Catchment area, the native forest growing at Arnups Road will improve the quality of water as it flows into Battery Creek.

In addition to our other work in the region, this project is helping improve the land connectivity within South Gippsland, which is an important tool to help wildlife move throughout the landscape. Blue Gum (Eucalyptus globulus) and Mountain Grey Gum (Eucalyptus cypellocarpa) were also planted here to provide habitat to koalas and the critically endangered Swift Parrot.

## Ngulambarra (VIC)

#### Dja Dja Wurrung Country

Ngulambarra, which means "meeting place" in Djaara language, is located in Central Victoria near Wedderburn.

The work at Ngulambarra is critical in improving biodiversity and building habitat for the wildlife in the region. The property forms a key part of the Wychitella Biolink and will help wildlife move through the landscape safely to breed and find food.

Working with the Traditional Owners, we have also restored over 20 hectares of this property with native grasses that can be cultivated for traditional use.

Read more about Hiddenvale >

Read more about Arnups Road >

Read more about Ngulambarra >

## Greentrees (NSW)

#### **Bundjalung Country**

Located near Lismore in Northern NSW, Greentrees is a property with high biodiversity values being restored to native forest.

The forest planted at Greentrees will extend habitat for the koalas in the region. Some of the native species planted were specifically chosen to provide habitat and food sources for these iconic animals.

There are at least 15 individual koalas already living in the remnant vegetation on the site and by connecting existing pockets of habitat, this project will help the current population of koalas thrive. It will also be critical in building on the region's biodiversity.

Read more about Greentrees >

## Anam Talamh (NSW)

#### **Bundjalung Country**

Located in the Byron Bay Hinterland, Anam Talamh is being restored with endangered rainforest plant species to build habitat and take critical climate action in the region.

As well as restoring Big Scrub Subtropical Rainforest, this project will extend habitat for koalas, the Wompoo Fruit Dove and other local wildlife species. It will help restore the Skinners Creek habitat corridor and help improve less productive areas of the property.

Read more about Anam Talamh >

## The Pines (NSW)

#### **Ngarigo Country**

Greenfleet's restoration of The Pines aims to create a vegetation and wildlife habitat corridor, which will link Kosciuszko National Park in the east with Woomargama National Park in the west.

This site will complement the nearby Jingellic, Bogandyera and Clarkes Hill nature reserves, ensuring significant local flora and fauna values are conserved.

The Pines will act as an important habitat steppingstone for many native species, including marsupials, birds, reptiles, amphibians and bats. Several threatened species including the Yellow-bellied Glider, Tiger Quoll, False Pipistrelle and Masked Owl will come to rely on the habitat restored at this site.

Read more about The Pines >

## Te Muri (NZ)

#### Puhoi, New Zealand

Located north of Auckland in New Zealand, Te Muri overlooks Mahurangi Harbour and the Hauraki Gulf.

Greenfleet has been revegetating this Regional Park since 2016 and in 2021, we continued this work which is playing a vital role in restoring and preserving the park's unique biodiversity and will help improve the quality of water that flows into Hungry Creek and the Puhoi River.

As well as improving biodiversity values and water quality, by restoring Pūriri-Broad Leaved Forest this project will help with habitat connectivity in the region, providing stepping stones for many bird species to move throughout the area.

Read more about Te Muri >

## **Upcoming projects**

## Glendalough

(VIC)

#### **Boon Wurrung Country**

In the rolling hills of South Gippsland, this cleared 240-hectare property will be returned to native forest. The property is adjacent to remnant native vegetation and will provide an important habitat link for Strzelecki Koalas and native birds such as the Yellow-faced Honeyeater and Grey Fantail.

## Spurfield Road

(NSW)

#### **Bundjalung Country**

In the Northern Rivers region of NSW, Greenfleet's revegetation of Spurfield Road will support local koala populations on the upper slopes of the property while restoring Big Scrub Subtropical Rainforest on the lower parts. Through the restoration of native forest on the alluvial and riparian zones on the property, water quality is expected to improve for the Wilsons River and Richmond River catchment.

# Cherry Gully & Cherry Avon (QLD)

Located north-east of Brisbane, Greenfleet will restore over 250 hectares of native ecosystem across these two properties, providing extensive habitat for koalas along the Cherry Gully riparian corridor. The native restoration along Cherry Gully, Ivory Creek and Brisbane River Catchment will improve water quality and deliver other far-reaching environmental benefits.

Learn more about our upcoming reforestation projects >
