

Wire Color	Power	Function 1	Function 2
Red	+12VDC Trigger #1	Projection Beam - LOW	Projection Beam High
White	+12VDC Trigger #2	Area Beam - HIGH	
Black	-12VDC Shared ground	Ground	Ground

Setting Up Your Harness

1. Solid RED is main power and will go to Pin#2 in each switch (total of 4 power wires ignore the 2 capped off)
2. The supplied switches are not backlit and do not require the 2 grounds in the harness (ignore those 2 grounds by taping back to the harness.) If you have a Carling switch that has a backlight you would use those grounds at that time.
3. The Red/White wire will go to Switch 1.
4. The White wire will go to Switch 2.
5. Any unused wires please secure
6. Any questions contact support@nachooffroadtechnology.com
