

i-grab™

RT-1000 RETRIEVAL TOOL KIT

The RT-1000 Mechanical Retrieval Tool Kit includes four standard jaw sets, control box, 100 ft. of cable and storage case. Made from 300 Series stainless steel, the RT-1000 (1.063" diameter) with gripping viper jaws can exert a closing force greater than 20 lbs. at 30 degrees closure. A 1/4 - 20 tapped hole on the aft end provides mounting options for tool manipulation.

Water proof up to 100 ft.

RVI inspection system solutions

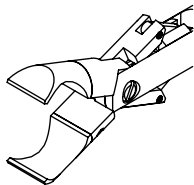

When remote visual inspection shows foreign matter in hard-to-reach places, reach for The iGrab RT-1000. This electro-mechanical retrieval and sampling tool locks onto targets with a force greater than 20 lbs., clamping fully in just 15 seconds.

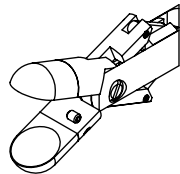

Constructed of 300 series stainless steel, The iGrab (Model RT-1000) performs numerous retrieval tasks in a variety of environments, including marine and freshwater. Jaws permit quick swapping of plier, fork-and-tine, viper and sampling cup attachments.

Driven by a powerful rare-earth gear motor, The iGrab RT-1000's 141:1 reduction worm drive delivers positive clamping force. Shock-mounting protects all drive components. This tough tool is built to deliver years of service, providing a quick, effective solution when foreign matter threatens the performance of mission-critical equipment.
