

Is Your 12 Gauge Really 12 Gauge?

For 91 years, Unistrut® has built a reputation based on quality and trust. In our industry, all reputations must be built on trust. There are some metal framing manufacturers in the market TODAY that claim their 12ga product meets ASTM requirements...but unfortunately, they DON'T. This is a danger to the safety of the customer's application, as well as the seller's reputation. You need to be able to trust your supplier because your customers trust you!

How important is your reputation?

UNISTRUT® P1000 PG
12 gauge strut - typical results

Competitor 1
"12 gauge strut" - 3.5% below minimum

Unistrut ran spot checks from multiple competitors who claim their channel is 12 gauge. The research indicates that their "12 gauge strut" does not meet the ASTM-AISI thickness tolerance while Unistrut's 12 gauge strut is well within the range and meets industry standards.

ASTM-AISI THICKNESS TOLERANCE RANGES

GALVANIZED STEEL SHEETS TOLERANCE RANGE

.0994 - .1174

Choose Unistrut – we set the standard for product design, quality and performance!
