

# SAFEPRO BALLASTED GUARDRAIL SYSTEMS

Guardrail system  
is 1.3 psi per base

Units nest together  
for easy transportation

Exceeds OSHA  
safety standards

Non-Penetrating design  
with support pad  
(sold separately)

## COMPLIANCE MADE EASY

The SafePro Ballasted Guardrail Systems are a passive safety system, that offers fall protection without the need for engineering, training, annual inspections or additional personal protective equipment like harnesses or lanyards. In addition to rooftop applications, guardrail can be installed along open-sided walking surfaces, terraces, balconies, stairways, ramps, and landings that expose workers to a fall of 4' or greater, making them one of the most efficient and cost-effective ways to comply with OSHA requirements.

## WHY CHOOSE SAFEPRO?

SafePro is an industry-leading provider of safety solutions for workers exposed to fall hazards. We collaborate with building owners, contractors, and architects to design and manufacture fall protection solutions for a variety of applications, in a variety of industries.

## PORTABLE GUARDRAIL

Designed to be easily installed section-by-section, the Portable Guard Rail system quickly adapts to quickly eliminate fall hazards. Portable guardrail is used with SafePro's patented counterweighted guardrail base. All prefabricated railing sections are available in a galvanized finish or powder coated safety yellow.

## MODULAR GUARDRAIL

Modular guardrail is custom-designed for every project and features Strongtight components that ensure a solid feel throughout the system with minimal micromovements. Modular guardrail means quick setup, repositioning, and takedown. The SafePro patented, counterweighted guardrail base uses proprietary geometry to achieve maximum safety with minimal weight, and disperses weight across a large footprint to ensure that a roof's membrane is never compromised.
