Note: Removal of the rear fender may aid in ease of installation, but it is not required

1. Protect painted surfaces.
2. To remove the stock fender:

   a. Remove the seat by lifting the nose of the seat and slide the seat backward off the mount

   b. Remove the four rear fender fasteners **(1)**

   c. Remove the rear light harness from the stud under the right side of the fender (do not cut the zip tie) **(2)**

   d. Cut the zip tie holding the harness to the license plate bracket.

   e. Disconnect the 6-place rear lighting connector **(3)**

3. Remove the stock tail light

   a. Remove zip ties and unplug the taillight wiring (taillight, turn signals, license plate light) **(4)**

   b. Disconnect the stock taillight connector from its anchor **(5)**

   c. Remove the three lock nuts that attach the license plate assembly and taillight to the fender **(6)**

   d. Remove the license plate assembly and taillight and set aside, but keep the taillight gasket in place
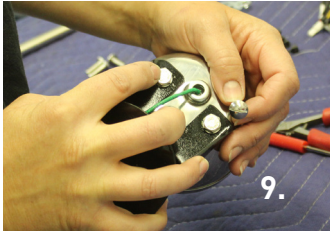

4. Drill out the three stock taillight mount holes to 9/32" **(7)**
5. Install the provided grommet into the wiring hole in the bracket **(8)**
6. Install the provided taillights onto the bracket using the 1/4-20 hex bolts in the kit. **(9)**
7. Run the taillight wiring through the grommet installed in step 5 **(10)**
8. Install the light assembly onto the fender making sure the stock taillight gasket is still in place. **(11)**
9. Install the license plate assembly onto the studs and install the provided 1/4-20 lock nuts finger tight
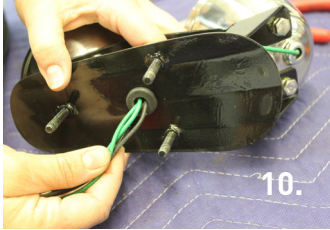

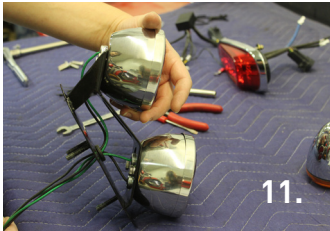

CAUTION: *Klock Werks cannot be held responsible for any damage to painted surfaces during removal or addition of Klock Werks parts.*

9.

10.

**11.**

12.

13.

14.

10. Install the lighting module:

    a. Ground the ring terminal to one of the license plate bracket studs **(12)**

    b. Plug in the lighting components to the module (they are color coded)

    c. Tuck the wiring back into the license plate bracket and secure using the provided zip ties **(13)**

11. Torque the three lock nuts installed in step 9 to secure the light assembly to the fender

12. Reinstall the fender and reattach the taillight wires to the fender and module connector **(14)**

13. Reinstall the seat and check taillight function

NOTE: This module corrects the load from the provided lights through the electrical system ensuring no error codes or light pulsing
