

EQUIGRIDS

The world's No.1 proven equestrian surfacing system

**Equestrian
Brochure**

Naturally!

EquiGrids from EcoGrid Ltd are THE patented, unique equine grid system made in Germany from recycled materials. They are THE NO.1 selling equine grid for all manner of equestrian needs in Europe, the USA, the UAE and Canada. The grids, in their various forms can be used throughout the whole equestrian field; taking everything to a new level of quality, durability and permeability.

From gallops, manegès, competition arenas, turn out paddocks to wash down areas, horse walkers, gateways, driveways, car park areas, trot-up areas and rubberised flooring. EquiGrids are the future and EquiGrids have a solution for all aspects of equestrian construction.

EquiGrids all interlink and have an unheard of 20 year product warranty, they are easy and economical to lay and will provide a permeable, virtually maintenance free, cost effective and durable surface unmatched by anything else on the market.

EquiGrids are a particular game changer in their use under gallops and manege tread surfaces where they promote natural horse movement. This is thanks to the high degree of elasticity and good grip, offering the horse a reliable ground surface.

The extreme impact from horses' hooves is especially well absorbed by all the grids especially by the S50 which has over 200 curved bars/m², providing even more elasticity. Unlike conventional ground grids with straight bars that remain rigid when loaded, the unique bars of EquiGrid always revert to their original shape, are crack-proof and withstand frost (-65 °C) as well as extreme heat. In this way, physical movement is rendered more forgiving, pleasant so the horses become more motivated and stay sounder. By using an appropriate tread layer, this effect is made even more positive.

What do we offer?

EquiGrids offer a number of packages to suit all budgets

Entry Level

Our entry level package which includes:

- NW8 Non-Woven Geotextile Fleece Membrane
- Fastrack G90 Woven Geotextile Membrane
- Single-Sided Geotextile Cloth Tape

A great cost effective solution for the budget conscious.

Superior Level

Our superior level package which includes:

- EG-HPS5 Non-Woven Geotextile
- Fastrack G90 (609 Woven Geotextile
- Single-Sided Geotextile Cloth Tape

Membrane is protected from tearing.

Premium Level

Our premium level package which includes:

- EquiGrids Elastic E40 Plastic Porous Paving
- NW8 Non-Woven Geotextile Fleece Membrane
- Single-Sided Geotextile Cloth Tape

Membrane is protected from tearing with the EquiGrids and the surface remains dry all year round.

Arena Surfaces

You pick the best tread layer that suits your riding needs. The grid systems are designed to provide a low maintenance surface layer whilst still retaining flexibility. The surface will allow you to have a free draining arena, paddock or manège that can be used all year round. Special attention is given to the build-up layers to ensure maximum drainage is maintained.

Our European leading surface build-up, with 40/50mm of EquiGrids drainage cells and an additional 120mm of clean stone filtration, particularly suitable where ride quality is paramount with peace of mind that the riding surface will remain practically maintenance free and dry throughout the year.

- ✓ Free draining
- ✓ Promotes natural movement
- ✓ All year round use
- ✓ Flexible surface support
- ✓ 20 year guarantee (grids)
- ✓ Low maintenance
- ✓ Increased surface life
- ✓ Made from recycled materials

Horse Walkers

Supporting the British Equestrian Industry

EquiGrids are an ideal free draining, flexible support layer that can be laid on top of concrete or on a free draining stone base of choice. EquiGrids will not lift nor come apart with use and are easy to fit. We supply a system that can be laid to a complete circle without joints or cuts. Work out the overall diameter, the width of the walker path and the diameter of the central portion. We will work out what you need. Suitable grids are: E50, E40, TP40 and TR40.

Area is excavated

Footings go in

Frame goes up
