## Screen-Printed Lanyards

Screen printing is also named silk screen printing\_ It is a process to make a mesh screen first with your design,lay the screen on the surface of fabric and apply coloured ink over the screen,then push the ink through the screen and so to create the design onto the fabric.

Screen printing is available on polyester/nylon/cotton materials.It is hand-made process and this have allowed us with top.stable quality.

## About Heated-Transferred Lanyards

Heated-transfer is a top quality printing process to create long lasting, multi colored design which is not possible with screen printing.

Heated-transfer is to print the design onto paper using dye sublimation inks and then be laid on the surface of lanyard. When heat and pressure are applied, the design on paper is transferred onto the fabric.
