DIY Ocean Art Kit #jenny1

This kit will come with all you need for this project. Check it out now. With PassionArt we make things easy for you and we are here for you with email and phone support.

How To Craft this Piece

- Volume of resin is depending on the size of the board you are using. Let us say this is a 500mm board and we aim for a coverage of 4mm you will need 785mls
- Measure out your resin into equal quantities
- Add your colours and mix
- Wrap tape around the outside edge of your board
- Pour Base cell white on first
- Spread it out to cover 2/3rds of board
- Gas torch bubbles
- Pour your blues at the bottom third and onto the white as well - make pattern
- Torch bubbles 2 seconds
- Use a heat gun with a wide nozzle to slowly blow the blues over the white
- As resin starts to set - Pull the tape off the side and let resin go over the side
- Rub outer edge with your fingers to smooth.

- Use gas torch if needed to pop any micro bubbles as well as help to create cell action (Cell Action = The formation of cells)
- At that point you are completed unless you want to put a top coat over for a final finish

Congratulations You have done it!! Please upload your images and story to [PassionArt NZ Resin Artists](#)
