Ultra-Fast Tabletop Resin

MIX RATIO 2 to 1 BY Weight

Calculate the amount of resin you need. This can be done on the resin calculator at resinzwood.com. Accuracy is important when mixing **Part A** and **Part B** together. This product is designed for pouring up to 8mm deep in 18 to 22c with a Cure Time of 3 to 5 hours. Full tutorial and info under How To at resinzwood.com Phone Support Call Paul 021966397

- You can preheat resin in containers in a hot water bath.
- Measure out Part A and Part B in separate containers by volume.
- Best calculation to use is 2mm to 3mm per square meter
- Add your **Part A** to **Part B** and mix well till blended.
- Use a flat stirrer for mixing. Avoid hard beating creating air bubbles.
- Pour out your resin. Use a blue flame torch to pop bubbles.
- Full Tutorial can be found under How To on resinzwood.com
- Pot Life at 1 liter 10 mins – Cure Time 3 to 5 hours
