WHAT IS AN AIR SCRUBBER?

An air scrubber with a rating of 500 CFM, such as the Thorair Air Scrubber, is a machine that uses advanced clean air performance and HEPA filter media to remove particles from the air. These air scrubbers can be used to restore indoor air quality on restoration jobs involving sewage, mold, or fire damage. Air scrubbers with 500 CFM are also ideal for abatement, dust control, and air scrubbing in areas contaminated by airborne pollutants, such as construction sites and light industrial applications .
