MENU+1234 : Enter Factory Settings Menu

Use the remote control to press "MENU+1234" to enter the factory setting menu.

Under the "Factory Menu", press "UP/DOWN" to select the desired option (or adjust the selected option). After selecting, press "ENTER" to enter the setting.

The ADC is adjusted to be automatically corrected by the front-end analog-to-digital conversion circuit under the VGA channel, and it can also be adjusted manually, but manual adjustment is not recommended. It is recommended to do AUTO ADC operation on the basis of the gray scale or color bar test screen under VGA to automatically correct the parameters of the digital-to-analog conversion circuit .

MENU+1234 : Enter Factory Settings Menu

Use the remote control to press "MENU+1234" to enter the factory setting menu.

The image mode refers to each parameter under the corresponding image page of the customer's main menu. Here, the data parameters under any mode can be adjusted, while the user menu can only adjust the parameters under the USE (user) mode. Here the factory menu is opened for the convenience of debugging, corresponding to five parameters (brightness, contrast, saturation, sharpness, hue).

The white balance mode is an operation item for controlling the color temperature at the back end of the decoded video signal. You can change the corresponding RGB parameters in the corresponding mode. It is recommended to only adjust the RGB GAIN to correct the white balance. It is recommended to use 16 gray levels as the test picture adjustment when adjusting.
