

Jeep JK and JKU Rear 3 Link Axle Truss and 3 Link Mount Kit Installation Instructions

Thank you for purchasing our JK rear truss kit and 3 link mount!

Installation notes:

- This product is designed to fit a 2007-2018 Jeep Wrangler JK and JKU Dana 44 rear axle (All models)
- This kit is designed for converting the rear suspension of your Jeep to a custom 3 link. This kit is not compatible with factory suspension
- We recommend the removal of the rear axle to make installation of this product easier

Tools required:

- Welder with the capability to weld at least 1/4" thick steel
- Grinder or other tool to remove paint
- Various hand tools

Step 1:

Assemble the upper link mount on the truss as shown in the exploded view below. All components of the truss are tabbed to fit together. After all components are assembled, place tack welds in various locations to hold the assembly together.

Step 2:

Place the truss assembly on the axle. The truss should be rotated 6° away from the differential cover mounting surface. When the truss is positioned properly weld the truss to the axle and weld the truss assembly together. If welding to the cast iron center section proper procedures need to be followed. If you are not familiar with the required procedures, we recommend having a shop complete the welding.

Congratulations you have completed the installation of your axle truss!
