FINAL

GENERAL INFORMATION

Product Description for Equipment under Test (EUT)

Applicant	Quanshun Communication And Technology Co., Ltd
Test Model	D30
Series Model:	D3X, D33, D35, D36, D37, D38, D39
Product	DMR Digital Portable Radio
Power Supply	DC 7.4V from battery; DC 5V/12V charging by adapter
*Highest Operation Frequency	470 MHz

Adapter-1 Information:

Model: GQ24-120200-AG

Input: 100-240V,50/60Hz,1.0A

Output: 12.0V,2.0A,24.0W

Adapter-2 Information:

Model: GQ05A-050100-ZG

Input: AC100-240V,50/60Hz,0.15A

Output: DC5.0V,1.0A,5.0W

*Note1: The highest operation frequency was provided by the applicant.

*Note2: The difference between test model and series model were explained in the attached declaration letter.

*All measurement and test data in this report was gathered from production sample serial number:

RXM210414051-1.(Assigned by the BACL. The EUT supplied by the applicant was received on 2020-04-14.)

Objective

This test report is prepared on behalf of *Quanshun Communication Technology Co., Ltd* in accordance with:

ETSI EN 301 489-1 V2.2.3 (2019-11), ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements.

ETSI EN 301489-5 V2.2.1 (2019-04), ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 5: Specific conditions for Private land Mobile Radio (PMR) and ancillary equipment (speech and non-speech) and Terrestrial Trunked Radio (TETRA).

The objective is to determine compliance with ETSI EN 301489-1 V2.2.3 (2019-11) and ETSI EN 301489-5 V2.2.1 (2019-04).

Test Methodology

All measurements contained in this report were conducted with ETSI EN 301 489-1 V2.2.3 (2019-11).

Test Facility

The test site used by Bay Area Compliance Laboratories Corp. (Kunshan) to collect test data is located on the No.248 Chenghu Road, Kunshan, Jiangsu province, China.

Bay Area Compliance Laboratories Corp. (Kunshan) Lab is accredited to ISO/IEC 17025 by A2LA (Lab code: 4323.01) and the FCC designation No. CN1185 under the FCC KDB 974614 D01 and CAB identifier CN0004 under the ISED requirement. The facility also complies with the radiated and AC line conducted test site criteria set forth in ANSI C63.4-2014.

FINAL

SYSTEM TEST CONFIGURATION

Description of Test Configuration

The system was configured for testing in a typical fashion (as normally used by a typical user)

Test mode 1: Charging by adapter 1(AC 230V/50Hz)

Test mode 2: Charging by adapter 2(AC 230V/50Hz)

Test mode 3: RX(Analog channel)+high power

Test mode 4: RX(Analog channel)+low power

Test mode 5: TX(Analog channel)+high power

Test mode 6: TX(Analog channel)+low power

Test mode 7: RX(Digital channel)+high power

Test mode 8: RX(Digital channel)+low power

Test mode 9: TX(Digital channel)+high power

Test mode 10: TX(Digital channel)+low power

EUT Exercise Software

No exercise software was used to test.

Equipment Modifications

No modifications were made to the EUT.

SUMMARY OF TEST RESULTS

	Description of Test	Result
Reference to clauses EN 301 489-1 §7.1	Reference to clauses EN 301 489-1 §8.2 Enclosure port	Compliant
	Reference to clauses EN 301 489-1 §8.3 DC power input/output ports	Not Applicable (See Note1)
	Reference to clauses EN 301 489-1 §8.4 AC mains power input/output ports	Compliant
	Reference to clauses EN 301 489-1 §8.5 Harmonic current emissions (AC mains input port)	Not Applicable (See Note2)
	Reference to clauses EN 301 489-1 §8.6 Voltage fluctuations and flicker (AC mains input port)	Compliant
	Reference to clauses EN 301 489-1 §8.7 Wired network ports	Not Applicable (See Note3)
Reference to clauses EN 301 489-1 §7.2	Reference to clauses EN 301 489-1 §9.3 Electrostatic discharge	Compliant
	Reference to clauses EN 301 489-1 §9.2 Radio frequency electromagnetic field (80 MHz to 6000 MHz)	Compliant
	Reference to clauses EN 301 489-1 §9.4 Fast transients, common mode	Compliant
	Reference to clauses EN 301 489-1 §9.8 Surges	Compliant
	Reference to clauses EN 301 489-1 §9.5 Radio frequency, common mode	Compliant
	Reference to clauses EN 301 489-1 §9.7 Voltage dips and interruptions	Compliant
	Reference to clauses EN 301 489-1 §9.6 Transients and surges in the vehicular environment(ISO 7637-2)	Not Applicable (See Note4)

Note:

- 1: AC/DC power supply, then the measurement shall be performed on the AC power input port.
- 2: According to EN IEC 61000-3-2:2019 section 7.1, For equipment with a rated power of 75 W or less, other than lighting equipment, limits are not specified in this document
- 3: There are no wired network ports.
- 4: This equipment will not in vehicular environment.

Immunity test performance criteria:

“A” means : CT/CR Reference to clauses EN 301 489-1 §6.1/EN 301 489-5 §6.1

“B” means : TT/TR Reference to clauses EN 301 489-1 §6.2/EN 301 489-5 §6.2

§8.4 - AC Mains Power Input/Output Ports

Measurement Uncertainty

Compliance or non-compliance with a disturbance limit shall be determined in the following manner:

If U_{lab} is less than or equal to U_{cispr} of Table 1, then:

- compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
- Non-compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit.

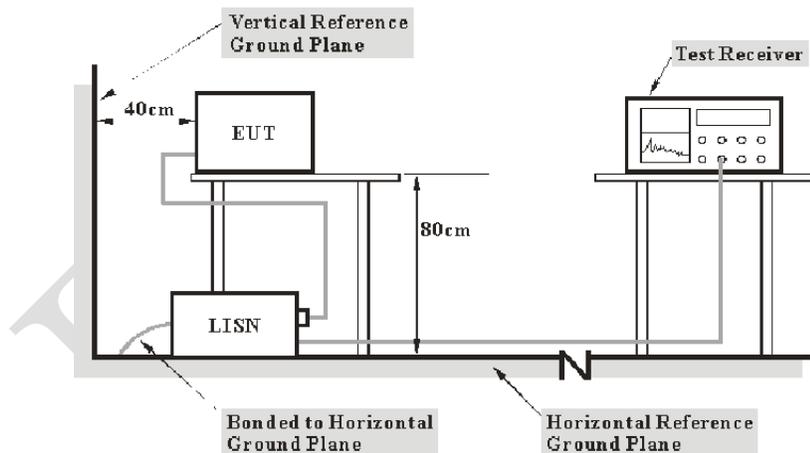

If U_{lab} is greater than U_{cispr} of Table 1, then:

- compliance is deemed to occur if no measured disturbance level, increased by $(U_{lab} - U_{cispr})$, exceeds the disturbance limit;
- Non-compliance is deemed to occur if any measured disturbance level, increased by $(U_{lab} - U_{cispr})$, exceeds the disturbance limit.

Table 1 – Values of U_{cispr}

Item		Tereminal	Measurement Uncertainty	U_{cispr}
Conducted Emission	150kHz~30MHz	AC Mains	3.19 dB	3.4 dB

EUT Setup

- Note: 1. Support units were connected to second LISN.
 2. Both of LISNs (AMN) 80 cm from EUT and at the least 80 cm from other units and other metal planes support units.

The setup of EUT is according with per EN 301489-1 measurement procedures. The specification used was with the EN 301 489-1 limits.

The external I/O cables were draped along the test table and formed a bundle 30 to 40 cm long in the middle.

The spacing between the peripherals was 10 cm.

EMI Test Receiver Setup

The EMI test receiver was set to investigate the spectrum from 150 kHz to 30 MHz.

During the conducted emission test, the EMI test receiver was set with the following configurations:

Frequency Range	IF B/W
150 kHz – 30 MHz	9 kHz

Test Equipment List and Details

Manufacturer	Description	Model	Serial Number	Calibration Date	Calibration Due Date
Rohde & Schwarz	EMI Test Receiver	ESR	1316.3003K03-101746-zn	2020-07-28	2021-07-27

* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Kunshan) attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

Test Procedure

Maximizing procedure was performed on the six (6) highest emissions of the EUT.

All data was recorded in the Quasi-peak and average detection mode.

Factor & Over Limit Calculation

The Factor is calculated by adding LISN VDF (Voltage Division Factor), Cable Loss and Transient Limiter Attenuation. The basic equation is as follows:

$$\text{Factor (dB)} = \text{LISN VDF (dB)} + \text{Cable Loss (dB)} + \text{Attenuator (dB)}$$

The “**Over Limit**” column of the following data tables indicates the degree of compliance with the applicable limit. For example, an over limit of 7 dB means the emission is 7 dB above the limit. The equation for margin calculation is as follows:

$$\text{Over Limit (dB)} = \text{Read level (dB}\mu\text{V)} + \text{Factor (dB)} - \text{Limit (dB}\mu\text{V)}$$

Test Data

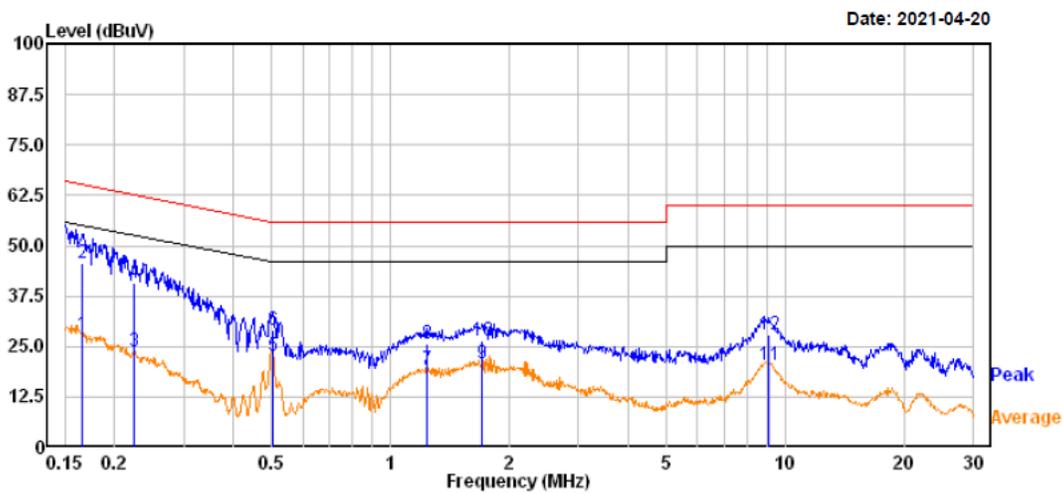

Environmental Conditions

Temperature:	24.5 °C
Relative Humidity:	50 %
ATM Pressure:	101.2 kPa

The testing was performed by Gerry Xing on 2021-04-20.

§8.2 - Enclosure port

Measurement Uncertainty

Compliance or non-compliance with a disturbance limit shall be determined in the following manner:

If U_{lab} is less than or equal to U_{cispr} of Table 1, then:

- compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
- Non-compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit.

If U_{lab} is greater than U_{cispr} of Table 1, then:

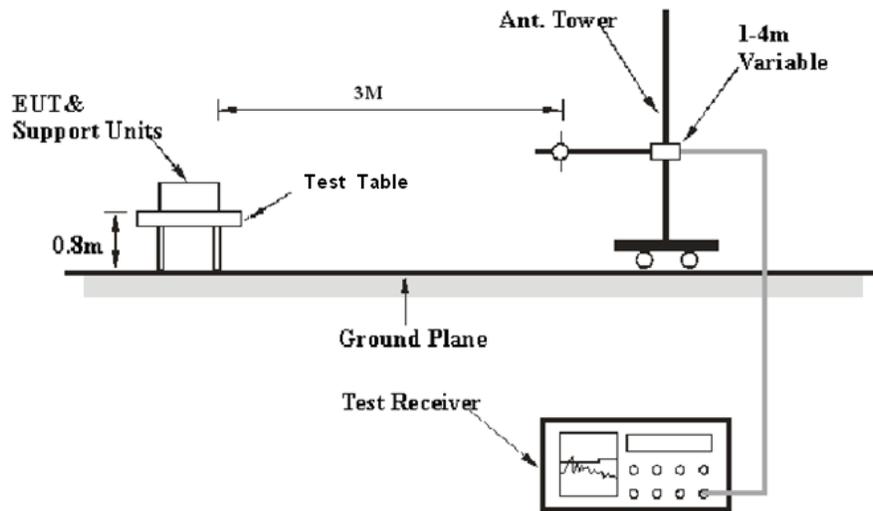

- compliance is deemed to occur if no measured disturbance level, increased by $(U_{lab} - U_{cispr})$, exceeds the disturbance limit;
- Non-compliance is deemed to occur if any measured disturbance level, increased by $(U_{lab} - U_{cispr})$, exceeds the disturbance limit.

Table 1 – Values of U_{cispr}

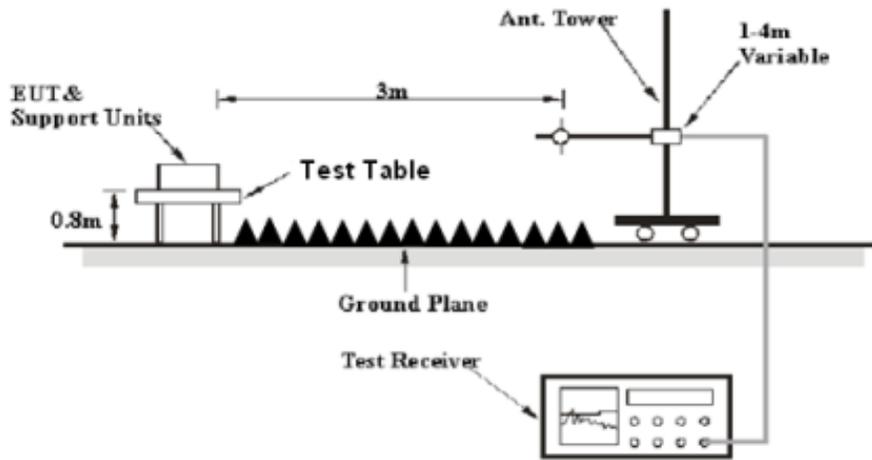

Item		Measurement Uncertainty	U_{cispr}
Radiated Emissions	30MHz~1GHz	6.11dB	6.3 dB
	1GHz~6GHz	4.45dB	5.2 dB

Test System Setup

Below 1GHz:

Above 1GHz:

Radiated Top View:

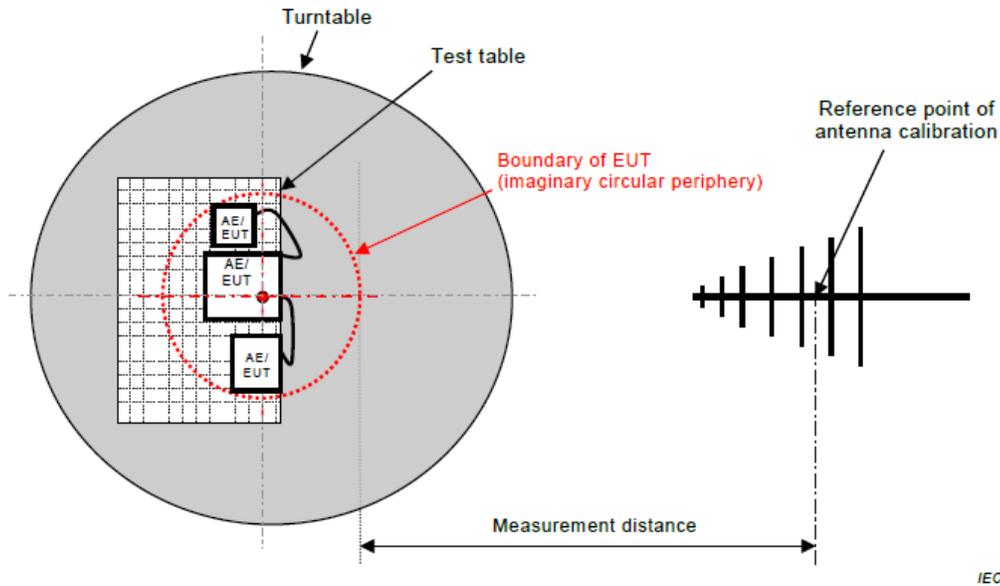

Figure C.1 – Measurement distance

The radiated emission tests were performed in the 3 meters, using the setup accordance with the ETSI EN 301 489-1 V2.2.3 (2019-11). The specification used was the ETSI EN 301 489-1 V2.2.3 (2019-11).

The external I/O cables were draped along the test table and formed a bundle 30 to 40 cm long in the middle.

The spacing between the peripherals was 10 cm.

EMI Test Receiver Setup

The system was investigated from 30 MHz to 2 GHz.

During the radiated emission test, the EMI test receiver Setup was set with the following configurations:

Frequency Range	RBW	Video B/W	Detector Type
30MHz - 1000 MHz	120 kHz	300 kHz	QP
Above 1 GHz	1 MHz	3 MHz	Peak
	1MHz	3 MHz	AVG

* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Kunshan) attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

Test Procedure

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

Corrected Amplitude & Margin Calculation

The Corrected Amplitude is calculated by adding the Antenna Factor and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

$$\text{Corrected Amplitude} = \text{Meter Reading} + \text{Antenna Factor} + \text{Cable Loss} - \text{Amplifier Gain}$$

The “**Margin**” column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7 dB means the emission is 7 dB below the limit. The equation for margin calculation is as follows:

$$\text{Margin} = \text{Limit} - \text{Corrected Amplitude}$$

Test Data

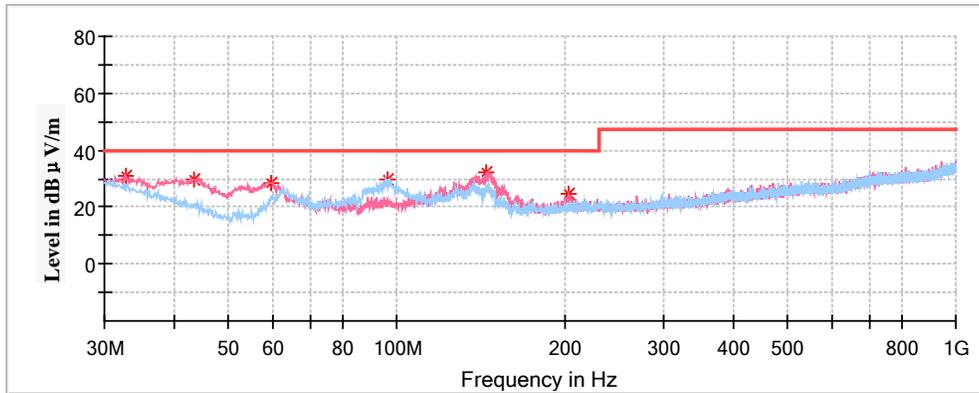

Environmental Conditions

* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Kunshan) attests that all calibrations have been performed in accordance to requirements, traceable to National Primary Standards and International System of Units (SI).

Test System Setup

Test Standard

EN 61000-3-3:2013+A1:2019

Flicker Test Limits:

The limits shall be applicable to voltage fluctuations and flicker at the supply terminals of the equipment under test, measured or calculated according to clause 4 under test conditions described in clause 6 and annex A. Tests made to prove compliance with the limits are considered to be type tests.

The following limits apply:

- the value of Pst shall not be greater than 1,0;
- the value of Plt shall not be greater than 0,65;
- the Tmax, the accumulated time value of d(t) with a deviation exceeding 3,3 % during a single voltage change at the EUT terminals, shall not exceed 500 ms;
- the relative steady-state voltage change, dc, shall not exceed 3,3 %;
- the maximum relative voltage change dmax, shall not exceed
 - a) 4 % without additional conditions;
 - b) 6 % for equipment which is:
 - switched manually, or
 - switched automatically more frequently than twice per day, and also has either a delayed restart (the delay being not less than a few tens of seconds), or manual restart, after a power supply interruption.

Note: The cycling frequency will be further limited by the Pst and Plt limit. For example: a dmax of 6 % producing a rectangular voltage change characteristic twice per hour will give a Plt of about 0.65. c) 7 % for equipment which is– attended whilst in use (for example: hair dryers, vacuum cleaners, kitchen equipment such as mixers, garden equipment such as lawn mowers, portable tools such as electric drills), or– switched on automatically, or is intended to be switched on manually, no more than twice per day, and also has either a delayed restart (the delay being not less than a few tens of seconds) or manual restart, after a power supply interruption.

In the case of equipment having several separately controlled circuits in accordance with 6.6, limits b) and c) shall apply only if there is delayed or manual restart after a power supply interruption; for all equipment with automatic switching which is energized immediately on restoration of supply after a power supply interruption, limits a) shall apply; for all equipment with manual switching, limits b) or c) shall apply depending on the rate of switching. Pst and Plt requirements shall not be applied to voltage changes caused by manual switching. The limits shall not be applied to voltage changes associated with emergency switching or emergency interruptions.

* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Kunshan) attests that all calibrations have been performed in accordance to requirements, traceable to National Primary Standards and International System of Units (SI).

Test System Setup

Remark: ■ is the tip of the electrode

EN 61000-4-2 specifies that a tabletop EUT shall be placed on a non-conducting table which is 80 centimeters above a ground reference plane and that floor mounted equipment shall be placed on an insulating support approximately 10 centimeters above a ground plane. During the tests, the EUT is positioned over a ground reference plane in conformance with this requirement.

For EUTop equipment, a 1.6 by 0.8-meter metal sheet (HCP) is placed on the table and connected to the ground plane via a metal strap with two 470 kOhms resistors in series. The EUT and attached cables are isolated from this metal sheet by 0.5-millimeter thick insulating material. A Vertical Coupling Plane (VCP) grounded on the ground plane through the same configuration as in the HCP is used.

Test Standard

ETSI EN 301 489-1 V2.2.3 (2019-11) / EN 61000-4-2:2009
 Test Level 3 for Air Discharge at ± 8 kV
 Test Level 2 for Contact Discharge at ± 4 kV

1.	2	2
2.	4	4
3.	6	8
4.	8	15
X.	Special	Special

Performance criterion: B

Test Procedure**Air Discharge:**

This test is done on a non-conductive surface. The round discharge tip of the discharge electrode shall be approached as fast as possible to touch the EUT. After each discharge, the discharge electrode shall be removed from the EUT. The generator is then re-triggered for a new single discharge and repeated 10 times for each pre-selected test point. This procedure shall be repeated until all the air discharge completed.

Contact Discharge:

All the procedure shall be same as Section 8.3.1 of EN 61000-4-2, except that the tip of the discharge electrode shall touch the EUT before the discharge switch is operated.

Indirect discharge for horizontal coupling plane

At least 50 single discharges shall be applied to the horizontal coupling plane, at points on each side of the EUT. The discharge electrode positions vertically at a distance of 0.1m from the EUT and with the discharge electrode touching the coupling plane.

Indirect discharge for vertical coupling plane

At least 50 single discharges shall be applied to the center of one vertical edge of the coupling plane. The coupling plane, of dimensions 0.5m * 0.5m, is placed parallel to, and positioned at a distance of 0.1m from the EUT. Discharges shall be applied to the coupling plane, with this plane in sufficient different positions that the four faces of the EUT are completely illuminated.

Test Data**Environmental Conditions**

Temperature:	24.5 °C
Relative Humidity:	52 %
ATM Pressure:	101.1 kPa

Performance Criterion: A

Test Procedure

The EUT and its simulators are placed on a turn table which is 0.8 meter above the ground. The EUT is set 3 meters away from the transmitting antenna which is mounted on an antenna tower. Both horizontal and vertical polarizations of the antenna are set on test. Each of the four sides of EUT must be faced this transmitting antenna and measured individually.

In order to judge the EUT performance, a CCD camera is used to monitor EUT. and we put RF Communications Test SET and Audio Analyzer outside of the chamber, but EUT is connected to RF Communications Test SET and Audio Analyzer, we observe intentionally transmit signal by Signal Analyzer.

The level of the wanted RF input signal shall be set to a maximum of 40 dB above the minimum usable receiver signal level. For radiated immunity testing this input level is measured while the power amplifiers generating the EM disturbance are switched on, but without excitation.

NOTE: This increased level of the wanted RF input signal is expected to represent a signal level and is intended to avoid the broadband noise from the power amplifiers generating the EM disturbance from influencing the measurement.

All the scanning conditions are as follows:

Condition of Test Remarks	
1. Field Strength	3 V/m (Test Level 2)
2. Radiated Signal	1 kHz, 80% AM, sine wave
3. Scanning Frequency	80 MHz– 6000 MHz
4. Scanning Frequency Step	1%
5. Dwell Time	3 Sec.

Test Data**Environmental Conditions**

Temperature:	24.3 °C
Relative Humidity:	50 %
ATM Pressure:	100.6 kPa

The testing was performed by Gerry Xing on 2021-04-28.

Test mode 1-2:

Performance Criterion: B

Test Procedure

The EUT was arranged for Power Line Coupling and for I/O Line Coupling through a capacitive clamp, where applicable. (Note: The I/O coupling test using a capacitive clamp is performed on the I/O interface cables that are longer in length than 3 meters.) A metal ground plane 2.4 meter by 2.0 meter was placed between the floor and the table and is connected to the earth by a 2.0 meter ground rod. The ground rod is connected to the test facility's electrical earth.

Test Data

Environmental Conditions

Temperature:	24.5 °C
Relative Humidity:	51 %
ATM Pressure:	101.2 kPa

The testing was performed by Gerry Xing on 2021-04-28.

Test mode 1 & 2:

EN 61000-4-4 Test Points		Test Levels (kV) Repetition frequency(5kHz)							
		+0.5	-0.5	+1.0	-1.0	+2.0	-2.0	+4.0	-4.0
AC Mains Power Input Ports	L	A	A	A	A	/	/	/	/
	N	A	A	A	A	/	/	/	/
	L+N	A	A	A	A	/	/	/	/
	L+PE	/	/	/	/	/	/	/	/
	N+PE	/	/	/	/	/	/	/	/
	L+N+PE	/	/	/	/	/	/	/	/
Signal Port	/	/	/	/	/	/	/	/	

Note: "A" stands for, during test, operate as intended no loss of function, no degradation of performance, no unintentional transmissions and after test, no degradation of performance, no loss of function, no loss of stored data or user programmable functions.

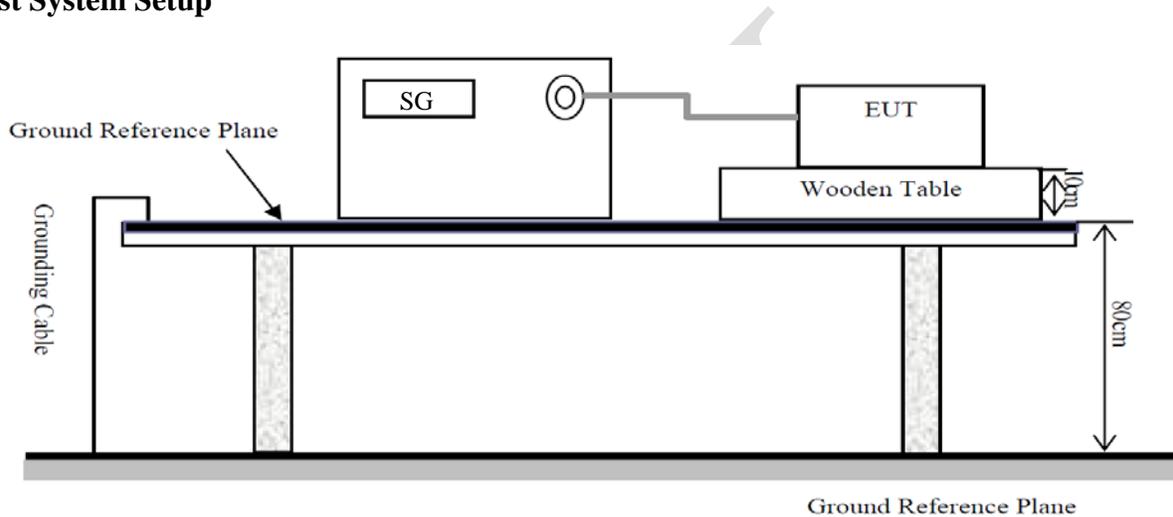

§9.8 - SURGES

Test Equipment

Manufacturer	Description	Model	Serial Number	Calibration Date	Calibration Due Date
EM TEST	Auto Transformer	MV 2616	0403-16	N/A	N/A
EM TEST	Ultra Compact Generator	UCS 500-M6 B	V0616101357	2020-07-06	2021-07-05

*** Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Kunshan) attests that all calibrations have been performed in accordance to requirements, traceable to National Primary Standards and International System of Units (SI).

Test System Setup

Test Standard

ETSI EN 301 489-1 V2.2.3 (2019-11) / EN 61000-4-5: 2014+A1:2017
 AC Mains: L+N: Test level 3 at 1 kV

Test Level

Level	Open Circuit Output Test Voltage $\pm 10\%$		Performance Criterion	
	Line - Line	Line - Ground	AC Mains	Signal Port
1	---	0.5 kV	---	---
2	0.5 kV	1 kV	---	---
3	1 kV	2 kV	B	---
4	2 kV	4 kV	---	---
X	Special	Special	---	---

Test Procedure

1. For line to line coupling mode, provide a 1.2/50 μ s voltage surge (at open-circuit condition) and an 8/20 μ s current surge into a short circuit.
2. At least 5 positive and 5 negative (polarity) tests with a maximum 1/min repetition rate are conducted during test.
3. Different phase angles are done individually.
4. Record the EUT operating situation during compliance test and decide the EUT immunity criterion for above each test.

Test Data and Setup Photo

Environmental Conditions

Temperature:	20.5 °C
Relative Humidity:	51 %
ATM Pressure:	101.2 kPa

The testing was performed by Gerry Xing on 2021-04-28.

Test model &2:

EN61000-4-5 Test Points		Test Levels (kV)							
		+0.5	-0.5	+1.0	-1.0	+2.0	-2.0	+4.0	-4.0

* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Kunshan) attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

Test Setup

Test Standard

ETSI EN 301 489-1 V2.2.3 (2019-11)/EN 61000-4-6: 2014
 Test level 2 at 3 V (r.m.s.), 0.15 MHz ~ 80 MHz

Test Level

Level	Voltage Level (r.m.s.) (U ₀)
1	1
2	3
3	10
X	Special

Performance Criterion: A**Test Procedure**

- 1) Let the EUT work in test mode and test it.
- 2) The EUT are placed on an insulating support 0.1m high above a ground reference plane. CDN (coupling and decoupling device) is placed on the ground plane about 0.3m from EUT. Cables between CDN and EUT are as short as possible, and their height above the ground reference plane shall be between 30 and 50mm (where possible).
- 3) The disturbance signal described below is injected to EUT through CDN.
- 4) The EUT operates within its operational mode(s) under intended climatic conditions after power on.
- 5) The frequency range is swept from 150 kHz to 80 MHz using 3V signal level, and with the disturbance signal 80% amplitude modulated with a 1 kHz sine wave.
- 6) The rate of sweep shall not exceed 1.5×10^{-3} decades/s. Where the frequency is swept incrementally, the step size shall not exceed 1% of the start and thereafter 1% of the preceding frequency value.
- 7) Recording the EUT operating situation during compliance testing and decide the EUT immunity criterion.

Test Data**Environmental Conditions**

Temperature:	25.3 °C
Relative Humidity:	50 %
ATM Pressure:	100.6 kPa

The testing was performed by Gerry Xing on 2021-04-28.

Test mode 1 & 2:

EN61000-4-6 Test Ports	Test Equipment	Frequency Range (MHz)	Voltage Level (e.m.f.) U ₀			
			1V	3V	10V	X
AC mains power input ports	M2	0.15-80	/	A	/	/
	/	/	/	/	/	/
Signal port	/	/	/	/	/	/

Note: "A" stands for, during test, operate as intended no loss of function, no degradation of performance, no unintentional transmissions.

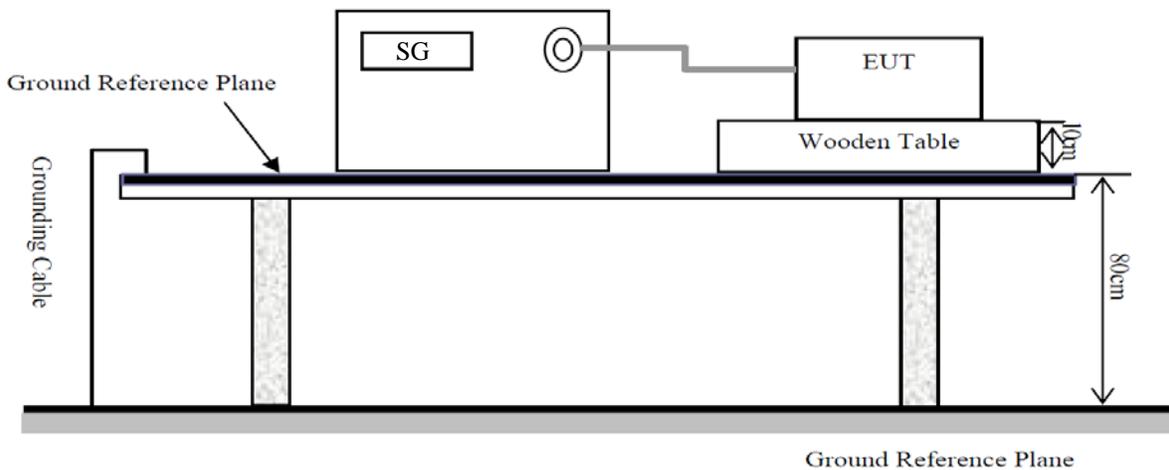

§9.7 - Voltage dips and interruptions

Test Equipment

Manufacturer	Description	Model	Serial Number	Calibration Date	Calibration Due Date
EM TEST	Auto Transformer	MV 2616	0403-16	N/A	N/A
EM TEST	Ultra Compact Generator	UCS 500-M6 B	V0616101357	2020-07-06	2021-07-05

*** Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Kunshan) attests that all calibrations have been performed in accordance to requirements, traceable to National Primary Standards and International System of Units (SI).

Test Setup

Test Standard

ETSI EN 301 489-1 V2.2.3 (2019-11) / EN IEC 61000-4-11:2020

Test levels and Performance Criterion

Test Level	Test Level	Cycle	Performance criterion
1	Voltage dips : 0% residual voltage	0.5	B
2	Voltage dips : 0% residual voltage	1	B
3	Voltage dips : 70% residual voltage	25	C
4	Voltage interruptions : 0% residual voltage	250	C

Test Procedure

1. The interruption is introduced at selected phase angles with specified duration.
2. Record any degradation of performance.

Test Data**Environmental Conditions**

Temperature:	24.5 °C
Relative Humidity:	51 %
ATM Pressure:	101.2 kPa

The testing was performed by Gerry Xing on 2021-04-28.

Test mode 1&2:

Test Level	Cycle	Phase Angle	Result
Voltage dips : 0% residual voltage	0.5	0°/90°/180°/270°	A
Voltage dips : 0% residual voltage	1	0°/90°/180°/270°	A
Voltage dips : 70% residual voltage	25	0°/90°/180°/270°	A
Voltage interruptions : 0% residual voltage	250	0°/90°/180°/270°	B

Note:

1. "A" stands for, during test, operate as intended no loss of function, no degradation of performance, no unintentional transmissions and after test, no degradation of performance, no loss of function, no loss of stored data or user programmable functions.
2. "B" stands for, during test,, the EUT will stop charging, and after the test, it can work normally without loss of function.
