

### Mounting the Power Hub:

- Using the fasteners provided, attach the shelf-bracket provided to the pre-drilled holes on the lower backing
- Attach the lower plate to the Power Hub before proceeding
- Hang the unit onto the shelf bracket and fasten the lower bracket to the backing

### Wiring Tips:

- Connect your Ecoflow components **first** before beginning to connect your appliances and outlets.
- The sidewall of the vertical door compartment is perfect for holding bus-bars for connecting your A/C Unit
- Do not obstruct ventilation channels with wiring if at all possible

### Mounting the AC/DC Distribution Panel:

- Attach mounting brackets to distribution panel first
- Depending on your AC/DC out direction, leave adequate space on the wire feed-in side of the panel before shooting it into the cabinet backing
- Use a level and the fasteners provided by EcoFlow if possible

### Mounting the Battery:

- Place battery (or batteries) in desired position with depth centered in upper shelf
- Slide the included mounting brackets firmly onto all four sides of the battery
- Mark hole locations with sharpie, remove battery + brackets
- Drill 1/8" pilot hole in all marked points, reinstall battery + brackets using fasteners included with battery tray
- Tighten down cinch straps properly and proceed to mount Power Hub
