

By utilising timber offcuts and elements from other products, Marz Designs presents a uniquely efficient range of contemporary lighting in Selene.

By exploring alternative means of production for the timber waste material, we were able to create a new offering and further improve our sustainability practices.

Timber is a tactile and versatile material which can be used and repurposed in multiple ways to develop new components. In this instance, the Selene Surface Sconce is inversely repurposed while the Selene Uplight – crafted from a quarter timber dome that sits atop a cylinder – is derived from the FSC certified timber offcuts from our Terra 00 range.

Both the Selene Uplight and Surface Sconce are produced in Small and Large sizes, each in a range of timber options including Ash, Walnut, Blackened Ash and Bleached Ash. The metal components are available in Brushed Black, White Powder Coat and Brushed Brass finishes.

SELENE UPLIGHT

ABOUT THE DESIGNER

Coco Reynolds lives and works in the Byron Bay hinterland. She began her career as an Industrial Designer and has subsequently worked professionally across a range of design related fields. In 2010 she established her independent practice Marz Designs, working in furniture, products, interiors and mixed materials. Her products reflect her passion for working with elemental materials and for marrying craft practice with industrial process.
